CHAPTER 1

Business Strategy Prompts

12 Prompts

Competitive Landscape Scanner

You are a market intelligence analyst with 20 years of experience in competitive analysis and strategic positioning.

Analyze the competitive landscape for: **[YOUR PRODUCT/SERVICE]**

Industry Context:

- Target market: **[e.g., B2B SaaS for marketing teams]**
- Price point: **[e.g., \$49/month]**
- Primary customer pain point: **[what problem you solve]**

Deliver:

1. ****Direct Competitors Matrix**** — Identify 5-7 direct competitors and map them across two axes: Price (low to high) and Feature Completeness (basic to advanced). Place each competitor in the grid with a one-sentence positioning statement.
2. ****Competitive Gaps Analysis**** — Identify 3 specific underserved segments or feature gaps in the current market that represent genuine opportunities (not just "better customer service").
3. ****Threat Assessment**** — For each major competitor, identify their strongest competitive advantage and the specific customer segment where they're unbeatable. Be honest about where you cannot win.
4. ****Positioning Wedge**** — Based on the gaps, recommend one specific positioning angle that differentiates you from all competitors. Format: "The only **[category]** that **[unique capability]** for **[specific audience]**."
5. ****Early Warning Signals**** — List 5 concrete signals to monitor that would indicate a competitor is about to neutralize your advantage (e.g., job postings, funding announcements, feature releases).

Present this as a strategic brief, not a generic list. Be brutally honest about competitive threats.

WHEN TO USE

Before finalizing your positioning, pricing, or messaging strategy to ensure you're not walking into a buzzsaw.

PRO TIP

Include URLs of 2-3 competitor products so the AI can reference real positioning and messaging if it has web access.

Business Model Stress Test

You are a business model architect who has advised 200+ startups and seen every failure mode. Your job is to find the breaking points in business models before the market does.

My Business Model:

- What we sell: [product/service]
- Who pays us: [customer type]
- Revenue model: [one-time/subscription/usage-based/etc.]
- Primary cost drivers: [what costs the most to deliver]
- Current scale: [revenue or customer count]

Run these 6 stress tests:

1. **The Scale Death Spiral** — At what point does growth make the business less profitable instead of more? Identify the specific operational bottleneck that breaks first.
2. **The Margin Compression Trap** — What market forces or competitor actions could squeeze margins by 50%? How sustainable is current pricing if competitors go aggressive?
3. **The Customer Concentration Risk** — If we lose our biggest customer or top 20% of customers, what happens to unit economics and fixed costs?
4. **The Acquisition Cost Inflation** — What happens if CAC doubles in the next 12 months due to market saturation or platform changes? At what CAC does the model break?
5. **The Churn Cascade** — Model a scenario where churn increases by 5% per month for 6 months. How quickly does the business become unsustainable?
6. **The Margin-of-Error Test** — If we're wrong about one key assumption (conversion rate, retention, ACV, etc.), which single error would be fatal? Rank assumptions by risk.

Final Output: For each breaking point, provide:

- Early warning metrics to monitor
 - One specific action to reduce that risk NOW
 - The "point of no return" threshold where it's too late to fix
- Be the pessimist I need, not the cheerleader I want.

WHEN TO USE

Before raising money, hiring aggressively, or making any decision that assumes your current business model will scale linearly.

PRO TIP

Add real numbers (CAC, LTV, churn rate, gross margin) if you have them — the AI will give you quantitative breaking points instead of generic warnings.

Customer Persona Deep Dive

You are a customer research expert who has conducted 1000+ customer interviews and built personas for companies like Stripe, Notion, and Figma.

Build a high-resolution persona for my target customer:

What I Know:

- Product: [what you're selling]
- Basic persona: [e.g., "marketing managers at B2B SaaS companies"]
- Main pain point: [what problem they have]

Build a persona that includes:

1. **The Day-in-the-Life Scenario** — Describe a typical Tuesday. What do they do from 9am–5pm? What tools do they use? What meetings do they attend? Where does my product fit into their actual workflow?
2. **The Buying Psychology Profile**
 - What does success look like in their role? (How are they measured?)
 - What are they afraid of? (What gets them fired?)
 - Who do they need to convince to buy? (Boss, team, procurement?)
 - What's their budget authority threshold without approval?
3. **The Objection Hierarchy** — List the 5 objections they'll have in order from first to last. For each, provide the underlying fear and the proof point that dissolves it.
4. **The Alternatives Framework** — Before they buy from me, what are they doing instead? Be specific: "Using Google Sheets + Slack + Friday meetings" not just "manual process."
5. **The Language Audit** — What exact phrases do they use to describe their problem? Give me 10 verbatim statements they'd say to a coworker (e.g., "I'm drowning in Slack messages and missing important stuff").
6. **The Trigger Event Map** — What 5 specific events make them suddenly start looking for a solution like mine? (e.g., "New boss asks for weekly reporting," "Team grows from 3 to 8 people")
7. **The Content Consumption Profile** — Where do they go to learn? Newsletters they read, podcasts they listen to, Slack/Discord communities they're in, specific subreddits or X accounts they follow.

Format this as a brief I can give to a copywriter, not a fluffy persona poster.

WHEN TO USE

Before writing any marketing copy, building landing pages, or deciding which features to prioritize.

PRO TIP

If you've done customer interviews, paste 2–3 raw quotes from real customers — the AI will mirror that authentic language throughout the persona.

Pricing Strategy Optimizer

You are a pricing strategist who has optimized monetization for 100+ SaaS and digital products, increasing revenue by an average of 34% without losing customers.

Current Situation:

- Product: **[what you sell]**
- Current price: **[price and model]**
- Target customer: **[who buys it]**
- Current conversion rate: **[% or "unknown"]**
- Main competitor prices: **[list 2–3 competitors and their pricing]**

Analyze and optimize my pricing with this framework:

1. ****Value Metric Diagnosis**** — Am I charging for the right thing? Evaluate whether I should charge by **[users/usage/value delivered/flat fee]**. For each model, explain which customer segment it attracts and which it repels.
2. ****The Price Anchoring Audit**** — Is my pricing structure making my core offer look expensive or cheap? Recommend a 3-tier structure (if I don't have one) with strategic price gaps that make the middle tier obvious.
3. ****The Willingness-to-Pay Ladder**** — Map 5 customer segments from lowest to highest willingness to pay. For each segment, identify what additional value would justify 2x the price.
4. ****The Margin Expansion Levers**** — Identify 3 ways to increase revenue per customer without adding features:
 - Packaging changes (bundling, unbundling, tiering)
 - Add-ons or usage-based components
 - Implementation, support, or service offerings
5. ****The Grandfathering Strategy**** — If I need to raise prices, provide a specific plan: Who gets grandfathered? For how long? What triggers the price increase for existing customers?
6. ****The Discount Danger Audit**** — Am I overusing discounts? Recommend which discounts to eliminate and what to offer instead (e.g., extended trials, bonus features, payment plans).
7. ****The Pricing Experiment Roadmap**** — Give me 3 specific A/B tests to run in priority order, with hypothesis, success metrics, and statistical significance targets.

Final Recommendation: Propose one specific pricing change I should test in the next 30 days with expected impact on MRR and conversion.

WHEN TO USE

When revenue growth stalls, before a major product launch, or when you suspect you're leaving money on the table.

PRO TIP

Include your CAC and target LTV:CAC ratio — the AI will ensure pricing recommendations actually support profitable growth, not just higher prices.

SWOT Analysis That Actually Helps

You are a strategic advisor who has conducted SWOT analyses for Fortune 500 companies and startups. You know that most SWOT analyses are useless because they're too vague. Your job is to make this one actionable.

Business Context:

- Company/Product: [name and what you do]
- Stage: [bootstrapped MVP / seed funded / scaling / etc.]
- Market: [industry and target customer]
- Goal for next 12 months: [specific objective]

Conduct a SWOT analysis with these rules:

STRENGTHS — List 4–6 strengths, but for each one:

- Explain why it's defensible (not easily copied)
- Identify which customer segment values it most
- Rate its durability (1–3 years) before competitors neutralize it

WEAKNESSES — List 4–6 weaknesses, but for each one:

- Assess severity: Is this a "deal-killer" or just a "friction point"?
- Estimate cost/time to fix
- Decide: Fix it, mitigate it, or accept it?

OPPORTUNITIES — List 4–6 opportunities, ranked by:

- ROI potential (high/medium/low)
- Time to capture (fast/medium/slow)
- Probability of success (%)
- Then recommend: Which ONE should I pursue first and why?

THREATS — List 4–6 threats, but for each one:

- Assign a likelihood (%) and impact (1–10 severity score)
- Provide an early warning signal to monitor
- Give one specific mitigation action I can take this month

Strategic Synthesis:

Based on this SWOT, answer:

1. What's my single biggest competitive advantage right now?
2. What's the one weakness most likely to kill the business if ignored?
3. What's the highest-ROI opportunity I should pursue in the next 90 days?
4. What's the one threat that keeps you up at night on my behalf?

Format as a strategic memo, not a 2x2 grid.

WHEN TO USE

Quarterly planning, before major strategic pivots, or when you feel stuck and need clarity on priorities.

PRO TIP

Add a "Recent events" section with 2–3 specific things that happened recently (competitor funding, customer churn spike, feature launch) — the AI will weave these into the analysis.

Revenue Forecasting Framework

You are a financial modeler who has built revenue projections for 200+ startups and has seen which assumptions break in reality. Build me a bottoms-up revenue forecast that's actually achievable.

Current State:

- Revenue model: [how you make money]
- Current MRR/Revenue: [number or "pre-revenue"]
- Sales cycle length: [days/weeks from lead to close]
- Current conversion rates: [visitor→lead→customer % or "unknown"]
- Average deal size: [\$ per customer]
- Current churn rate: [monthly % or "unknown"]

Time Horizon: [e.g., next 12 months]

Build a forecast that includes:

1. **The Assumptions Table** — List every assumption I'm making:

- Traffic/lead generation rate
- Conversion rate at each funnel stage
- Average contract value
- Churn/retention rate
- Expansion revenue rate
- For each assumption, mark it: Conservative / Realistic / Optimistic

2. **The Three-Scenario Model**:

- **Pessimistic Case** (30% probability): What if 2-3 key assumptions are wrong? Model it.
- **Base Case** (50% probability): Realistic growth with current trajectory
- **Optimistic Case** (20% probability): What if things go better than expected?

3. **The Monthly Build** — Show me month-by-month revenue for the base case, broken down by:

- New customer revenue
- Expansion revenue (upsells/cross-sells)
- Churned revenue (what we lose)
- Net new MRR each month

4. **The Growth Levers Analysis** — For each lever (increase traffic, improve conversion, reduce churn, increase ACV), calculate:

- How much would a 10% improvement in this lever increase annual revenue?
- Rank levers by ROI potential
- Recommend which ONE to focus on first

5. **The Reality Check Questions**:

- What has to be true for this forecast to hit?
- What's the single assumption most likely to be wrong?
- At what point should I panic if we're behind this plan?
- What leading indicators should I track weekly to know if we're on track?

6. **The Funding Requirement** — Based on this forecast and current burn rate, when do I run out of money in each scenario? Do I need to raise capital, and if so, when should I start that process?

Format: Give me a narrative explanation plus a simple month-by-month table I can recreate in a spreadsheet.

WHEN TO USE

Before setting annual goals, when planning hiring, or when deciding whether to raise funding.

PRO TIP

If you have historical data (even just 3-6 months), include actual numbers — the AI will use real trend lines instead of generic growth curves.

Partnership Evaluation Matrix

You are a business development strategist who has evaluated 500+ partnership opportunities and knows that most partnerships waste time without generating results.

Evaluate this potential partnership:

Partnership Opportunity:

- Partner: [company name and what they do]
- Type: [co-marketing / integration / reseller / referral / affiliate / joint product]
- Their pitch: [what they're proposing]
- What they want from me: [effort, resources, revenue share, etc.]

My Business:

- What I do: [your product/service]
- Target customer: [who I sell to]
- Current stage: [size, revenue, team size]

Evaluate across these dimensions:

1. **Strategic Fit Score (1-10)**

- Do we share the same target customer?
- Is there actual overlap or is this a stretch?
- Are we complementary or competing?
- Scoring rationale:

2. **Value Asymmetry Analysis**

- What I get: [specific value — leads, distribution, credibility, etc.]
- What they get: [specific value]
- Who benefits more? By how much?
- Is this equitable or exploitative?

3. **The Opportunity Cost Calculation**

- Time required from me: [hours/week]
- What else could I do with that time?
- What's the expected ROI? (Revenue / Time Invested)
- Is this the best use of my next 100 hours?

4. **The Downside Risk Assessment**

- What's the worst case scenario?
- Could this damage my brand or customer relationships?
- What if they pivot, get acquired, or shut down?
- Exit strategy: How hard is it to unwind this?

5. **The Proof-of-Value Test**

- Before committing, what's a micro-test we could run?
- What success metrics would validate this partnership?
- How long until we know if this is working?

6. ****The Negotiation Leverage Map****

- What do I have that they need?
- What's my BATNA (best alternative to this partnership)?
- Where can I push for better terms?
- Red flags to watch for in the agreement

Final Recommendation:

- Decision: Pursue / Pass / Renegotiate terms
- If pursue: What specific terms should I negotiate?
- If pass: What would need to change for this to be worth it?
- What's the smallest possible commitment I can make to test this?

WHEN TO USE

Before signing any partnership agreement, affiliate deal, or co-marketing arrangement.

PRO TIP

Include the partner's approximate size/stage (scrappy startup vs established company) — the leverage dynamics completely change the analysis.

MVP Scope Definer

You are a product strategist who has shipped 50+ MVPs and knows the difference between "minimum viable" and "minimum lovable." Your job is to help me cut scope ruthlessly while keeping the product viable.

Product Vision:

- What I want to build: **[product description]**
- Problem it solves: **[core pain point]**
- Target user: **[who this is for]**
- Success metric: **[how I'll measure if it works]**

Current Feature List:

[List all features you're considering — be exhaustive]

Define my MVP using this framework:

1. ****The Core Value Hypothesis**** — In one sentence, complete this: "Users will pay for this product if and only if it helps them **[specific outcome]**." Everything else is noise.
2. ****The Feature Triage****

Sort every feature into one of these categories:

- ****CORE**** — Without this, the product doesn't solve the problem at all
- ****ENHANCER**** — Makes the core better but isn't required for validation
- ****DELIGHT**** — Nice-to-have that improves experience
- ****DISTRACTION**** — Sounds cool but doesn't serve the core hypothesis

3. ****The MVP Feature Set**** — List only CORE features. For each one, explain:

- Why this is absolutely required for V1
- What's the simplest possible implementation?
- What manual workaround can replace automation in V1?

4. ****The Fake Door Test List**** — For each ENHANCER feature, design a fake door test:

- Add a button/link that goes to a "Coming soon, want early access?" page
- Measure click-through rate to validate demand before building

5. ****The Technical Debt Budget**** — What shortcuts can I take in V1 that I'll regret later?

- Rank these by: Easy to fix later (take the shortcut) vs. Architectural nightmare (do it right)

6. ****The Launch Checklist**** — What's the absolute minimum required to launch?

- Must have: **[core features]**
- Can fake manually: **[what founder can do behind the scenes]**
- Can ship later: **[everything else]**

7. ****The Time-to-Feedback Estimate**** — With this scope:

- How long to build? (weeks)
- How many users do I need to validate the hypothesis?
- What specific feedback would prove this works or doesn't work?

The Brutal Cut Question: If I had to ship in 2 weeks, what would I cut? That's probably what I should cut anyway.

WHEN TO USE

Before writing a single line of code, or when your MVP is bloated and you need to refocus.

PRO TIP

Include your timeline constraint ("want to launch in 6 weeks") — the AI will force cuts based on time, not just theoretical importance.

Product Positioning Statement Builder

You are a positioning expert who has defined category-creating positions for companies like Stripe ("payments for developers"), Figma ("design tool for teams"), and Notion ("all-in-one workspace").

My Product:

- What it does: **[product description]**
- Who it's for: **[target customer]**
- Main benefit: **[what value it delivers]**
- Key differentiator: **[what makes it different]**
- Current positioning (if any): **[how you describe it today]**

Build a positioning strategy using this framework:

1. **The Category Decision:**

- Option A: Compete in an existing category (easier to explain, harder to win)
- Option B: Create a new category (harder to explain, easier to own)
- Which strategy fits my product, market maturity, and resources?
- Recommendation with rationale:

2. **The Positioning Statement Formula:**

Complete this template with 3 different variations:

"For **[target customer]** who **[customer need/pain]**, **[product name]** is a **[category]** that **[key benefit]**. Unlike **[alternatives]**, we **[unique differentiator]**."

- Version 1: Broad positioning (bigger market, more competition)
- Version 2: Niche positioning (smaller market, less competition)
- Version 3: Category creation (new frame entirely)

3. **The Comparison Test:**

For your recommended positioning, complete these customer statements:

- "Oh, so it's like **[familiar product]** but for **[different use case]**"
- "I'd use **[competitor]** when I need **[X]**, but I'd use **[your product]** when I need **[Y]**"
- If you can't complete these clearly, the positioning is too vague

4. **The One-Word Ownership Goal:**

- Zoom = Video meetings
- Calendly = Scheduling
- Notion = Workspace
- What one word should people associate with my product in 2 years?

5. **The Messaging Hierarchy:**

Based on the positioning, create:

- **Headline** (5-10 words): The hook that stops scrolling
- **Subheadline** (10-20 words): Clarifies what it does and who it's for
- **Three Proof Points** (one sentence each): Why should they believe the claim?

6. **The Wrong Customer Filter:**

- Who should NOT buy this product?
- What use cases should we explicitly say NO to?
- Clear positioning requires clear exclusions

7. **The Positioning Validation Tests:**

- Can a 10-year-old explain what this product does after reading the positioning?
- Would my target customer self-identify when they hear the positioning?
- Does the positioning highlight a differentiator that competitors can't easily copy?

Final Output: Give me the ONE positioning statement I should use everywhere (website, pitch deck, ads) with tactical messaging for each channel.

WHEN TO USE

Before building your website, raising funding, or launching paid advertising.

PRO TIP

Include 2-3 competitor taglines so the AI can explicitly differentiate you from how they position themselves.

Market Entry Risk Assessment

You are a market entry strategist who has evaluated 300+ go-to-market plans and can predict which markets are attractive vs. dangerous for new entrants.

Market Entry Scenario:

- Market/niche: **[what market you want to enter]**
- Product: **[what you're selling]**
- Target customer segment: **[specific buyer]**
- Your advantage: **[why you think you can win]**
- Available resources: **[team size, runway, budget]**

Assess the risks across these dimensions:

1. ****Incumbency Risk (1-10 severity)****

- Who owns this market today?
- How entrenched are they? (Network effects, switching costs, brand moat)
- What would it cost them to kill my product? (acqui-hire me, copy features, price me out)
- Can I survive if they decide I'm a threat?

2. ****The Customer Acquisition Gauntlet****

- What channels work in this market?
- What's the typical CAC for this customer segment?
- Are those channels already saturated?
- Do I have a CAC advantage or disadvantage vs. incumbents?
- Reality check: Can I afford to acquire customers at market rates?

3. ****The Timing Test****

- Is this market growing, stable, or declining?
- Am I early (have to educate), on-time (land grab mode), or late (defensive market)?
- What macro trends support or threaten this market?
- What's the window of opportunity? (How long until it closes?)

4. ****The Regulation & Compliance Minefield****

- Are there regulatory barriers to entry? (licensing, certifications, compliance)
- How long and how much does compliance cost?
- Are regulations getting stricter or more relaxed?
- Could regulation kill my business model?

5. ****The Margin Reality Check****

- What are typical gross margins in this market?
- What are typical CAC and LTV multiples?
- Can I build a profitable business at market prices?
- Or am I forced into a VC-funded blitzscale or die scenario?

6. ****The Competitive Response Scenario****

- If I gain traction, how will incumbents respond?

- Can they copy my features in 6 months?
- Can they use their advantages (brand, distribution, capital) to crush me?
- What's my defensibility after year 1?

7. ****The Founder-Market Fit Test****

- Do I have unique insight, distribution, or credibility in this market?
- Or am I an outsider trying to break in?
- What unfair advantage do I have that compensates for late entry?

Risk Matrix:

Plot risks on two axes:

- Likelihood (low/medium/high)
- Impact if it happens (1-10)
- Mitigation: For high-likelihood + high-impact risks, give me one action to reduce exposure

Final Verdict:

- Overall risk level: Low / Medium / High / Extremely High
- Recommendation: Green light / Proceed with caution / Reconsider / Hard pass
- If proceeding: What's the ONE risk I absolutely must mitigate before launch?
- If passing: What alternative market would be safer with similar upside?

WHEN TO USE

Before committing significant resources to a new market, product line, or geographic expansion.

PRO TIP

Add "Recent market events" (funding rounds, M&A, new regulations) — the AI will factor in real-time market dynamics, not just theoretical risks.

Customer Retention Strategy

You are a retention optimization expert who has reduced churn for 100+ SaaS and subscription businesses. You know that acquiring customers is expensive and keeping them is where real profit lives.

Current Situation:

- Product: [what you sell]
- Customer type: [who buys]
- Pricing model: [how you charge]
- Current churn rate: [monthly % or "unknown"]
- Average customer lifetime: [months or "unknown"]
- Top cancellation reasons (if known): [list or "unknown"]

Build a retention strategy with this framework:

1. **The Churn Diagnosis:**

Churn happens at predictable moments. Map the customer journey and identify:

- **Early churn** (Days 1-30): What causes buyers' remorse or failed onboarding?
- **Mid-life churn** (Months 2-6): When do customers stop seeing value?
- **Late-stage churn** (6+ months): What makes long-term customers leave?
- For each phase, hypothesize the top 2 churn drivers

2. **The Value Realization Roadmap:**

Define the "aha moment" — the exact point where a customer gets enough value that they'll stay:

- What action or outcome signals they "got it"?
- How long does it take the average customer to reach this milestone?
- What % of customers never reach it? (These will churn)
- Design 3 tactics to get more customers to the "aha moment" faster

3. **The Engagement Scoring System:**

Build a simple health score (0-100) based on:

- Product usage signals (logins, feature usage, etc.)
- Relationship signals (support tickets, NPS, expansion conversations)
- Give me the formula and define thresholds:
- 80-100 = Thriving (expansion opportunity)
- 50-79 = Healthy (maintain)
- 20-49 = At risk (intervention needed)
- 0-19 = Churning (save or let go)

4. **The Intervention Playbook:**

For each health score segment, design a specific intervention:

- **At Risk** (50-20 score): What outreach, offer, or support can rescue them?
- **Churning** (20-0 score): What's the Hail Mary save offer? (pause subscription, discount, white-glove support)
- **Thriving** (80-100 score): How do we expand revenue? (upsell, cross-sell, referral ask)

5. **The Win-Back Campaign:**

For customers who already churned:

- Segment 1: Churned due to price → Offer?
- Segment 2: Churned due to missing features → What's changed?
- Segment 3: Churned due to lack of usage → What educational content or onboarding would help?
- Design 3 win-back email sequences (one per segment)

6. **The Retention Metrics Dashboard:**

What should I track weekly to improve retention?

- Leading indicators (predict churn before it happens)
- Lagging indicators (measure churn after the fact)
- For each metric, give me the target benchmark for a healthy business

7. **The Expansion Revenue Engine:**

Retained customers should grow in value over time:

- What triggers an upsell conversation? (usage thresholds, team growth, etc.)
- What's the logical next product or tier?
- Design a net revenue retention (NRR) target: What % of customers should expand vs. churn?

30-Day Action Plan: Give me the top 3 retention initiatives I should implement this month, ranked by impact and effort.

WHEN TO USE

When churn is above 5% monthly, when CAC payback takes too long, or when you need to improve unit economics fast.

PRO TIP

If you have access to churn data, include the top 3 cancellation reasons customers give — the AI will design retention tactics that directly address those pain points.

Investor Pitch Deck Outliner

You are a pitch deck consultant who has helped 200+ founders raise \$500M+ in funding. You know what investors actually care about vs. what founders think they care about.

Fundraising Context:

- Company: [name and one-sentence description]
- Stage: [pre-seed / seed / Series A]
- Raising: [\$ amount]
- Traction: [revenue, users, growth rate, or "pre-launch"]
- Market: [industry and TAM size if known]

Build a pitch deck outline with these slides:

1. **SLIDE 1 — Company Intro**

- One-sentence hook that makes investors lean in
- Format: "[Company] is [what you do] for [who], solving [expensive problem]."
- Example: "Stripe is payments infrastructure for developers, eliminating weeks of integration work."

2. **SLIDE 2 — The Problem**

- What's the painful, expensive, urgent problem?
- Who has this problem and how much does it cost them today?
- Why hasn't this been solved yet?
- Make the investor feel the pain personally

3. **SLIDE 3 — The Solution**

- How does your product solve the problem?
- Show don't tell: Include a visual (screenshot, diagram, or flow)
- Why is this solution 10x better than alternatives, not 10% better?

4. **SLIDE 4 — Market Size (TAM/SAM/SOM)**

- TAM (Total Addressable Market): How big is the entire market?
- SAM (Serviceable Available Market): How much could you realistically capture?
- SOM (Serviceable Obtainable Market): What's your 3-year revenue target?
- Show bottoms-up math, not top-down "1% of a giant market" BS

5. **SLIDE 5 — Product Demo / How It Works**

- Walk through the core user flow in 3-5 steps
- Use visuals, not bullet points
- Highlight the "magic moment" where value is delivered

6. **SLIDE 6 — Traction**

- What proof do you have that this works?
- Revenue, users, growth rate, retention, marquee customers
- Show a "hockey stick" growth chart if possible
- If pre-revenue: LOIs, waitlist size, pilot customers, or founder credibility

7. **SLIDE 7 — Business Model**

- How do you make money?
 - What do you charge and why?
 - Unit economics: CAC, LTV, gross margin, payback period
 - Path to profitability (even if it's 5 years out)
8. ****SLIDE 8 — Go-to-Market Strategy****
- How will you acquire customers?
 - What channels work today and which will you add at scale?
 - What's your unfair distribution advantage?
 - Why won't customer acquisition costs skyrocket as you scale?
9. ****SLIDE 9 — Competition & Differentiation****
- Who are the alternatives? (Direct competitors, indirect solutions, status quo)
 - Why will you win? (Not "better product" — what structural advantage do you have?)
 - Show a 2x2 matrix positioning you uniquely
10. ****SLIDE 10 — Team****
- Why is this team uniquely qualified to win this market?
 - Highlight relevant expertise, domain credibility, or previous exits
 - Show you can build, sell, and scale
 - If missing key roles, acknowledge what you'll hire for
11. ****SLIDE 11 — Financial Projections****
- 3-year revenue projection (conservative, base, aggressive)
 - Key assumptions (CAC, LTV, conversion rates)
 - What milestones will this raise unlock?
12. ****SLIDE 12 — The Ask****
- How much are you raising?
 - What will you use it for? (Breakdown: 60% engineering, 30% GTM, 10% ops)
 - What milestones will you hit with this capital?
 - What's the next round look like? (Give them the vision for 18–24 months out)

For each slide, provide:

- Slide title
- 2–3 bullet points of what to include
- One "investor objection" this slide must preemptively answer
- One "red flag to avoid" (common mistakes founders make on this slide)

Bonus: The Narrative Arc

Write a 2-minute verbal pitch script that connects these slides into a compelling story. Investors decide emotionally, then justify rationally. Give them a narrative, not just data.

WHEN TO USE Before creating your first pitch deck or when refining an existing deck that isn't landing with investors.

PRO TIP Include your "unfair advantage" (unique insight, proprietary tech, exclusive partnership, etc.) — the AI will weave this throughout the deck as your key differentiator.

CHAPTER 2

Content Creation Prompts

12 Prompts

Blog Post Architecture

You are an expert content strategist who builds blog posts that rank and convert.

I need a complete blog post structure for: [TOPIC]

My target reader is: [SPECIFIC AUDIENCE — be detailed about their pain points, experience level, and what they're trying to achieve]

Primary goal of this post: [Rank for [KEYWORD]] / Build email list / Sell [PRODUCT] / Establish authority]

Create a detailed outline including:

1. **Title Options** — Give me 5 headline variations optimized for [SEO / Curiosity / Social shares]. Include the emotional trigger each one uses.
 2. **Opening Hook** (2–3 sentences): Start with a surprising fact, provocative question, or relatable scenario — never start with "In today's world" or similar clichés
 3. **Content Architecture** — Break down 5–7 H2 sections with:
 - The exact H2 text (keyword-aware but human-written)
 - 2–3 bullet points of what each section must cover
 - Specific examples, data points, or stories to include
 - Transition strategy to the next section
 4. **Engagement Mechanisms** — Identify 3 places in the post to add:
 - A scroll-stopping visual or quote card
 - An interactive element (self-assessment, calculator, checklist)
 - A pattern interrupt (controversial take, myth-busting, case study twist)
 5. **Conversion Architecture** — Design the CTA strategy:
 - Soft CTA placement (where and what type)
 - Primary CTA (exact copy + placement)
 - Exit-intent offer (if applicable)
 6. **SEO Foundation** — List:
 - Primary keyword + 4–5 semantic variants to weave in naturally
 - 3 internal link opportunities (describe the anchor context)
 - Meta description (155 characters, includes keyword + curiosity gap)
- Make this outline so detailed I could hand it to any writer and they'd produce a 10/10 post.

WHEN TO USE

Use this when you need a comprehensive blog post plan that handles strategy, structure, SEO, and conversion in one shot instead of writing aimlessly.

PRO TIP

Fill in the "target reader" section with extreme specificity (job title, exact frustration, what they Googled) — the more detailed your reader description, the better the outline matches real search intent.

Newsletter That People Actually Read

You are a newsletter strategist who has studied the top 1% of newsletters that maintain 50%+ open rates and single-digit unsubscribe rates.

Help me write my next newsletter issue.

Newsletter Context:

- My audience: **[WHO THEY ARE + WHAT THEY CARE ABOUT]**
- Newsletter tone: **[Professional and data-driven / Casual and story-driven / Contrarian and spicy / Educational and actionable]**
- Typical length: **[500 words / 1000 words / 1500+ words]**
- Send frequency: **[Daily / Weekly / Biweekly]**

This Issue's Content:

Main topic/story I want to cover: **[TOPIC]**

Key insight or takeaway: **[THE ONE THING readers should remember]**

Create a complete newsletter structure:

1. ****Subject Line Formula**** — Give me 5 subject line options using these high-performing patterns:

- Curiosity gap (promise without revealing)
- Specificity (numbers, data, named examples)
- Contrarian (challenge conventional wisdom)
- Urgency (timely, trending, "this just happened")
- Personal (vulnerable, behind-the-scenes, lesson learned)

For each, explain WHY it works and predict open rate potential.

2. ****Opening Line**** — Write 3 different opening sentences. Each should accomplish one of these:

- Make a bold claim that demands a response
- Tell a micro-story (2-3 sentences max) that illustrates the main point
- Ask a question that 80% of readers will answer "yes" to

3. ****Core Content Structure**** — Organize the main content using ONE of these proven frameworks (choose the best fit):

- ****Problem → Agitation → Solution**** (for educational content)
- ****Story → Lesson → Application**** (for experience-driven content)
- ****Observation → Analysis → Prediction**** (for trend/news content)
- ****Mistake → Consequence → Correction**** (for lessons learned)

Write the full structure with subheadings and key points for each section.

4. ****Retention Devices**** — Add 2-3 of these to keep readers engaged:

- A surprising data point or counterintuitive fact
- A "this reminds me of" connection to something unexpected
- A one-sentence case study or named example
- A visual description (describe what the reader should imagine)

5. ****The Close**** — Write two closing options:

- **Soft close**: Thought-provoking question or reflection (no hard ask)
 - **Action close**: One clear, specific thing the reader should do next
6. **P.S. Section** — Write a P.S. that does ONE of these:
- Teases next week's topic
 - Shares a quick personal update or behind-the-scenes
 - Includes a soft pitch or relevant resource
 - Poses a question that encourages reply

Make this newsletter feel like it came from a human who respects my time, not a content robot.

WHEN TO USE

Use this before writing any newsletter issue when you want a strategic structure that keeps readers engaged from subject line to P.S. instead of winging it and losing people halfway through.

PRO TIP

Always choose ONE framework for the core content structure and stick to it — mixing frameworks creates confusion and tanks readability.

Social Caption Batch Creator

You are a social media strategist who specializes in creating scroll-stopping captions that drive engagement and build audience.

I need to batch-create social media captions for the next [TIMEFRAME: week / 2 weeks / month].

Account Details:

- Platform: [Instagram / LinkedIn / Twitter/X / TikTok / Facebook]
- My niche/industry: [SPECIFIC NICHE]
- Target audience: [WHO THEY ARE + WHAT THEY STRUGGLE WITH]
- Account goal: [Grow followers / Drive traffic / Build authority / Generate leads / Sell products]
- Brand voice: [Describe in 3-5 adjectives: educational, witty, vulnerable, no-BS, inspirational, etc.]

Content Themes I Post About:

1. [THEME 1 — e.g., productivity tips, industry news, personal journey, etc.]
2. [THEME 2]
3. [THEME 3]

Create [NUMBER: 7-20] captions using this high-performing structure for EACH caption:

Hook (First Line):

- Must work in the feed preview (first 125 characters)
- Use one of these proven patterns: Bold claim, Surprising stat, Relatable pain point, Contrarian take, Story opening, Direct question, "Here's what nobody tells you about X"

Body (Main Content):

- Break into short paragraphs (2-3 lines max per paragraph)
- Use ONE clear structure: Listicle (3-5 points) / Story arc / Problem-solution / Before-after / Myth-busting
- Include at least one specificity marker (number, name, time, place)
- Add one vulnerability moment or personal insight

CTA (Call to Action):

- Engagement CTA: Ask a specific question readers can answer in comments
- OR Traffic CTA: Direct to link in bio with clear benefit
- OR Tag CTA: "Tag someone who needs to hear this"

Format Each Caption Like This:

Caption [NUMBER] — [THEME]

[Platform-specific optimization note: Hashtag strategy for IG, tag suggestions for LinkedIn, thread potential for X]

[FULL CAPTION TEXT]

Best time to post: [Day/time based on content type]

Pair with: [Suggest visual type — carousel, single image, video, text graphic]

Distribution Strategy:

- Organize captions by theme (so I can batch-create visuals)
- Vary the hook patterns across all captions (no repetitive openings)
- Include a mix of content types: 60% educational/valuable, 30% engaging/entertaining, 10% promotional
- Mark which 2-3 captions have the highest viral potential

Make these captions feel authentic to my voice while following proven engagement formulas.

WHEN TO USE

Use this when you need to create a week or month of social content in one session instead of staring at a blank caption box every single day.

PRO TIP

After getting all captions, ask the AI to "rewrite caption [NUMBER] in 3 different voice variations" for any that feel off-brand — this fine-tunes the tone without starting from scratch.

Video Script Framework

You are a video script strategist who specializes in writing scripts that hold attention, deliver value, and drive action.

I need a complete video script.

Video Details:

- Platform: [YouTube / TikTok / Instagram Reels / YouTube Shorts / LinkedIn / VSL/Sales video]
- Video type: [Tutorial / Explainer / Story / Review / Opinion/Commentary / Sales/Promo]
- Target length: [Under 60 sec / 60-90 sec / 3-5 min / 5-10 min / 10-20 min / 20+ min]
- Topic: [WHAT THE VIDEO IS ABOUT]
- Viewer goal: [What should the viewer be able to do/know/feel after watching?]

Audience Context:

- Who they are: [SPECIFIC DESCRIPTION]
- What they already know: [Their current knowledge level on this topic]
- Why they're watching: [The problem they're trying to solve or outcome they want]

Create a complete video script with these sections:

1. HOOK (First 3-8 seconds)

Write the exact opening line + visual direction.

- Must answer: "Why should I keep watching?"
- Use a pattern: Make a promise, Show the end result, Challenge a belief, Ask a question they can't ignore, Start mid-action/story
- Include: [On-screen text suggestion if applicable]
- Retention goal: Stop the scroll and commit to watching

2. PROMISE/SETUP (Next 5-15 seconds)

Bridge from hook to content.

- Clearly state what this video will deliver
- Add credibility marker (your experience, result, unique angle)
- Set expectations (time, complexity, outcome)
- Transition smoothly into main content

3. MAIN CONTENT (Core of the video)

Structure the teaching/story/explanation using ONE of these frameworks:

For Educational/Tutorial:

- Problem → Why it matters → Solution (step-by-step) → Common mistake to avoid → Quick recap

For Story/Experience:

- Setup (situation) → Conflict (what went wrong) → Turning point → Resolution → Lesson/takeaway

For Opinion/Commentary:

- The mainstream belief → Why that's incomplete/wrong → My contrarian take → Evidence/example → Implications

Write the full script with:

- ****[VISUAL]**** cues in brackets for what should be on screen
- ****[B-ROLL]**** suggestions for supporting footage
- ****[ON-SCREEN TEXT]**** for key points to reinforce
- Natural speech patterns (conversational, not robotic)
- Built-in pattern interrupts every 30–45 seconds (visual change, tonal shift, new info)

4. RETENTION MECHANISMS

Mark where to insert these throughout the script:

- ****Callback****: Reference the hook/promise ("Remember when I said...")
- ****Curiosity loop****: Tease something coming later ("More on that in a second...")
- ****Proof point****: Quick example, stat, or case study
- ****Relatability moment****: "You know when..." or "This happened to me..."

5. CLOSE & CTA

Write two closing options:

Option A — Engagement CTA:

- Quick recap of key point
- Specific question for comments
- Suggested next video (if applicable)

Option B — Action CTA:

- One clear next step
- Where to go (link, profile, product)
- Benefit of taking action NOW

6. METADATA PACKAGE

- Title: 3 options (optimize for platform algorithm + clickability)
- Thumbnail text: 3–5 words max that create curiosity gap
- Description: First 150 characters (what shows before "read more")
- Tags/Hashtags: Platform-appropriate list

7. TIMING BREAKDOWN

Provide timestamp structure:

- 0:00–0:03 Hook
- 0:03–0:15 Promise/Setup
- 0:15–X:XX Main Content (broken into logical segments)
- X:XX–End Close & CTA

Write this script so I can read it naturally on camera or send it to a video editor and they'll know exactly what to create.

WHEN TO USE

Use this before filming any video when you want a complete script with visual direction, retention hooks, and CTAs instead of rambling on camera and hoping it works.

PRO TIP

Always specify your target length — the AI will structure retention mechanisms and pacing differently for a 60-second Reel vs. a 10-minute YouTube video.

Headline Swipe File Generator

You are a direct response copywriter who has studied decades of high-converting headlines across ads, landing pages, emails, and editorial content.

I need a swipe file of headline formulas customized for my specific offer/topic.

What I'm Promoting:

- Offer/Topic: **[PRODUCT, SERVICE, ARTICLE TOPIC, OR IDEA]**
- Target audience: **[WHO + THEIR MAIN DESIRE OR PAIN POINT]**
- Unique mechanism or angle: **[What makes this different/better/new]**
- Desired action: **[What should they do after reading the headline: Click, Buy, Read, Subscribe, Share]**

Create 25 headlines organized by proven psychological frameworks:

CURIOSITY HEADLINES (5 headlines)

Pattern: Create information gap without revealing the answer

- "The **[Surprising Thing]** That **[Desirable Outcome]**"
- "What **[Authority Figure]** Knows About **[Topic]** That You Don't"
- "The **[Number]** **[Thing]** Nobody Tells You About **[Topic]**"
- "**[Unexpected A]** Is The New **[Expected B]**"
- "Why **[Counterintuitive Claim]**"

BENEFIT-DRIVEN HEADLINES (5 headlines)

Pattern: Lead with the end result, not the process

- "How To **[Achieve Specific Outcome]** In **[Timeframe]** Without **[Common Obstacle]**"
- "Get **[Specific Result]** Even If **[Limiting Belief]**"
- "**[Do Desirable Thing]** Like **[Aspirational Comparison]**"
- "The **[Simple Method]** For **[Achieving Goal]** That **[Impressive Qualifier]**"
- "**[Number]** Ways To **[Accomplish Goal]** Starting **[Timeframe]**"

FEAR/PROBLEM-FOCUSED HEADLINES (5 headlines)

Pattern: Agitate the pain point before hinting at solution

- "Are You Making These **[Number]** **[Mistake Type]** Mistakes?"
- "What Everyone Gets Wrong About **[Topic]**"
- "The **[Common Approach]** Trap (And How To Avoid It)"
- "**[Negative Outcome]** Is Killing Your **[Desired Result]**"
- "Why Your **[Current Solution]** Isn't Working"

SPECIFICITY HEADLINES (5 headlines)

Pattern: Use concrete numbers, names, or data points

- "**[Specific Number]** **[Things]** That **[Generated Specific Result]**"
- "How **[Named Person/Company]** **[Achieved Specific Outcome]** In **[Exact Timeframe]**"
- "From **[Negative Starting Point]** To **[Positive End Point]** In **[Specific Time]**"
- "**[Exact Number]**% Of **[Audience]** Don't Know This About **[Topic]**"
- "I **[Did Specific Thing]** For **[Number]** **[Time Period]** — Here's What Happened"

CONTRARIAN/BOLD CLAIM HEADLINES (5 headlines)

Pattern: Challenge conventional wisdom or make controversial statement

- "Why **[Popular Belief]** Is Wrong About **[Topic]**"
- "**[Conventional Wisdom]** Is Dead. Here's What Works Now."
- "Forget **[Common Advice]** — Do This Instead"
- "The Uncomfortable Truth About **[Topic]**"
- "**[Controversial Statement]** And Why That's Actually Good News"

For each headline, include:

-  ****Why it works****: The psychological trigger it uses
-  ****Best use case****: Where this headline performs best (ads, email subject, blog title, social post)
-  ****Power rating****: Rate conviction/clickability on 1-10 scale

Also provide:

1. ****Top 3 Headlines****: Which 3 have the highest combination of curiosity + clarity + credibility
2. ****A/B Test Pairs****: Suggest 3 pairs to split test (explain why each matchup is worth testing)
3. ****Red Flags****: Which headlines might trigger skepticism or create wrong expectations

Make these headlines specific enough to use immediately, not generic templates.

WHEN TO USE

Use this when you need headline options for a launch, campaign, or piece of content and you want to test multiple psychological angles instead of guessing what will work.

PRO TIP

Take the top 3 headlines and ask the AI to "create 5 more variations of headline [NUMBER] using the same psychological framework but different word choices" to get even more options in that winning style.

Content Repurposing Machine

You are a content strategist who specializes in extracting maximum value from a single piece of content by adapting it for multiple platforms and formats.

I have one piece of core content and I want to repurpose it into **[NUMBER]** different formats.

Original Content:

- Format: **[Blog post / Video / Podcast episode / Newsletter / Twitter thread / Case study / Webinar]**
- Topic: **[WHAT IT'S ABOUT]**
- Key points/takeaways: **[LIST 3-5 MAIN IDEAS]**
- Length: **[Word count / Duration]**
- Target audience: **[WHO IT'S FOR]**

[PASTE THE FULL CONTENT OR DETAILED SUMMARY HERE]

Repurpose this into the following formats:

[Select the formats you want — delete the ones you don't need]

1. TWITTER/X THREAD (8-12 tweets)

- Hook tweet that stops the scroll
- Each tweet is a standalone insight (quotable)
- Built-in curiosity gaps to keep reading
- Strong close with CTA
- Suggested reply-guy comment to boost engagement

2. LINKEDIN POST (Carousel or text post)

- Professional but conversational tone
- Clear value proposition in first 2 lines
- Structured for LinkedIn algorithm (line breaks, readability)
- Ends with engagement question
- If carousel: suggest 6-10 slide topics with headline for each

3. INSTAGRAM CAPTION + CAROUSEL

- Scroll-stopping first line
- Caption length: **[Short 150 words / Medium 300 words / Long 500+ words]**
- 8-10 carousel slide topics with headlines
- Hashtag strategy (mix of reach + niche tags)
- Story prompt to drive engagement

4. EMAIL NEWSLETTER VERSION

- Compelling subject line (3 options)
- Condensed to **[300 / 500 / 800]** words
- Restructured for skimmers (subheads, bullets, bold text)
- Clear CTA that drives to **[original content / product / reply]**

5. SHORT-FORM VIDEO SCRIPT (60-90 seconds)

- Platform: [TikTok / Instagram Reel / YouTube Short]

- Hook (first 3 seconds)
- 3-5 key points delivered rapid-fire
- Visual/B-roll suggestions for each point
- On-screen text recommendations
- Strong CTA

6. LONG-FORM VIDEO/PODCAST OUTLINE

- Teaser/intro (what this episode covers)
- Timestamp structure (5-8 segments)
- Key talking points for each segment
- Stories or examples to illustrate points
- Timestamps for YouTube chapters

7. QUOTE GRAPHICS (5 variations)

- Pull the 5 most shareable one-liners
- Suggest visual style for each (text treatment, background, etc.)
- Platform recommendation for each quote

8. LEAD MAGNET / DOWNLOADABLE

- Transform into: [Checklist / Cheat sheet / Template / Workbook / Guide]
- Title for the resource
- 1-page outline of what it includes
- CTA copy for the opt-in

9. SLIDE DECK / PRESENTATION

- 10-15 slide outline
- Headline for each slide
- Key visual or data point per slide
- Use case: [Pitch deck / Educational presentation / Workshop / Webinar]

10. FAQ BLOG POST

- Extract 5-7 questions answered by the original content
- Rewrite as Q&A format
- SEO-friendly structure (each question as H2)
- Internal link opportunities

Repurposing Strategy:

- **Publishing order**: What should go out first, second, third (and why)
- **Timing gaps**: How many days between each format to avoid audience fatigue
- **Cross-promotion**: How each format should reference the others
- **Tracking**: What metrics to watch for each format

For each repurposed piece, include:

-  Estimated time to create
-  Expected engagement level (low/medium/high) for my audience
-  Primary goal (traffic, engagement, authority, leads)

Turn my one piece of content into a full content ecosystem.

WHEN TO USE

Use this after creating any substantial piece of content (blog post, video, podcast) when you want to squeeze 10-20 pieces of content from one core idea instead of letting it die after one post.

PRO TIP

Don't repurpose everything at once — use the AI's "publishing order" recommendation to space out releases over 2–4 weeks so you're not competing with yourself.

SEO Content Brief Builder

You are an SEO content strategist who creates comprehensive content briefs that help writers create first-page ranking content on the first draft.

I need a complete SEO content brief for a target keyword.

Target Keyword: **[EXACT KEYWORD PHRASE]**

Additional Context:

- My website/brand: **[YOUR SITE]**
- Domain authority (if known): **[DA SCORE or "new site" or "established"]**
- Content type: **[Blog post / Guide / Comparison / Review / Listicle / How-to]**
- Business goal: **[Rank and capture traffic / Support product sales / Build email list / Establish authority]**

Create a comprehensive SEO content brief with these sections:

1. SEARCH INTENT ANALYSIS

Based on this keyword, determine:

- Primary intent: **[Informational / Navigational / Commercial / Transactional]**
- What the searcher actually wants: **[Describe in plain language what problem they're trying to solve]**
- Where they are in the buyer journey: **[Awareness / Consideration / Decision]**
- Implied questions they need answered (list 5-7 questions)

2. SERP COMPETITIVE ANALYSIS

Analyze what's currently ranking (even if you have to make educated inferences based on keyword type):

- Common content formats: **[Listicles / Long-form guides / Videos / Tools / Product pages]**
- Average word count of top 10 results: **[Estimate range]**
- Content gaps: What are top-ranking pages missing that we could provide?
- Differentiation angle: How can we make this better/different/more specific?

3. KEYWORD STRATEGY

- Primary keyword: **[THE MAIN TARGET]**
- Secondary keywords (4-6): **[Related terms to include naturally]**
- LSI keywords (6-10): **[Semantic variations and related concepts Google expects to see]**
- Long-tail variations (3-5): **[More specific versions of the main keyword]**
- Where to use primary keyword: **[Title, H1, first 100 words, subheadings, meta description, URL slug]**

4. CONTENT STRUCTURE

Provide a detailed outline:

Title Tag (60 characters max):

[Write 3 title options that include keyword + modifier/benefit]

Meta Description (155 characters max):

[Write 2 options that include keyword + value prop + CTA]

URL Slug:

[yoursite.com/suggested-slug]

H1 Headline:

[Primary keyword-focused headline — can be different from title tag]

Introduction (100–150 words):

- Hook that matches search intent
- Include primary keyword in first 100 words naturally
- Promise what the article will deliver
- Optional: Add credibility statement

H2 Section Outline:

Break into 6–10 H2 sections:

H2: [Section Headline — should include secondary keyword when natural]

- Key points to cover: [Bullet list]
- Supporting examples/data needed: [Specific type]
- Approximate word count: [150–300 words]
- Internal link opportunity: [Yes/No — if yes, suggest anchor text + target page]

[Repeat for each section]

Conclusion (100–150 words):

- Recap main takeaway
- Include CTA: [Subscribe / Download / Read related / Take action]

5. CONTENT REQUIREMENTS

- **Target word count**: [Based on competition + depth needed]
- **Reading level**: [8th grade / 10th grade / Technical]
- **Tone**: [Professional / Conversational / Academic / Friendly expert]
- **Expertise signals to include**: [Author credentials / Data sources / Case studies / Original research]
- **E-E-A-T signals**: [Experience examples / Expertise markers / Authority indicators / Trust elements]

6. VISUAL & MEDIA ELEMENTS

Suggest:

- Featured image concept
- 3–5 in-content visuals: [Screenshots / Diagrams / Charts / Examples / Infographics]
- Video embed opportunity: [Yes/No — if yes, what type]
- Interactive elements: [Calculator / Checklist / Quiz / Embed]

7. INTERNAL LINKING STRATEGY

- Target number of internal links: [3–7]
- Suggested anchor text + target pages: [List 3–5 specific opportunities]
- Contextual placement notes

8. EXTERNAL LINKING STRATEGY

- Number of external links: [2–5 to authoritative sources]
- Types of sources to cite: [Research / Studies / Tools / Examples]
- Link placement strategy: [Support claims / Provide additional resources]

9. OPTIMIZATION CHECKLIST

Before publishing, verify:

- [] Primary keyword in: Title, H1, first 100 words, at least one H2, conclusion, meta description, URL
- [] Readability score: [Target Flesch score]
- [] Alt text on all images (include keyword in featured image alt text)

- [] Schema markup: [Article / HowTo / FAQ / Review — which applies?]
- [] Mobile-friendly formatting (short paragraphs, subheadings every 300 words)
- [] Page speed optimization (compressed images, no render-blocking)

10. SUCCESS METRICS

Track these after publishing:

- Ranking position for primary keyword (weeks 4, 8, 12)
- Impressions and CTR in GSC
- Bounce rate and time on page
- Conversion rate for CTA
- Backlinks acquired naturally

Make this brief so detailed that anyone following it will create content with the best chance of ranking.

WHEN TO USE

Use this before writing any SEO-focused content when you want a data-driven brief that handles keyword research, content structure, and optimization requirements instead of guessing what Google wants.

PRO TIP

After getting the brief, ask the AI to "analyze the top 3 ranking pages for [keyword] and tell me specifically what content angles they're missing that we should include" for an even stronger differentiation strategy.

Email Copy That Converts

You are a conversion copywriter who specializes in writing emails that get opened, read, and clicked.
I need a high-converting email.

Email Details:

- Type: [Promotional / Launch / Nurture / Re-engagement / Cart abandonment / Onboarding / Newsletter with CTA]
- Goal: [Get clicks to sales page / Book calls / Download resource / Reply to email / Purchase directly / Attend event]
- Recipient: [Cold audience / Warm subscribers / Engaged segment / Past customers / Trial users]
- Email position in sequence: [Standalone / Email #X in Y-email sequence]

Offer/Product Context:

- What you're promoting: [PRODUCT/SERVICE/RESOURCE]
- Price point: [Free / \$X / \$X-\$Y range / Premium \$\$\$\$]
- Main benefit: [The #1 outcome/transformation]
- Key objections: [List 2-3 reasons someone wouldn't buy/click]
- Urgency/scarcity: [Deadline / Limited spots / Bonus expires / None]

Audience Context:

- What they already know about you: [First touch / Subscribed recently / Long-time subscriber / Past customer]
- Their awareness level: [Unaware of problem / Problem-aware / Solution-aware / Product-aware / Most aware]
- Primary pain point: [What frustration does this solve?]

Write a complete email with these components:

1. SUBJECT LINE

Give me 5 subject line options using different psychological triggers:

- **Curiosity**: [Create information gap]
- **Benefit**: [Lead with outcome]
- **Urgency**: [Time-sensitive angle]
- **Personalization**: [Make it about them]
- **Contrarian**: [Challenge expectation]

For each, provide:

- Predicted open rate potential (Low / Medium / High)
- Risk of spam folder (Low / Medium / High)
- Best audience fit

2. PREVIEW TEXT (40-90 characters)

Write 2 preview text options that complement the subject line without repeating it.

3. EMAIL BODY

Use ONE of these proven structures (choose based on goal + audience awareness):

STRUCTURE A: PAS (Problem–Agitate–Solution)

Best for: Promotional emails to problem–aware audience

- Opening: Identify the problem (2–3 sentences that create "yes, that's me" feeling)
- Agitation: Make the pain vivid (what happens if they don't solve this)
- Solution: Introduce your offer as the resolution
- Proof: Social proof, result, or credibility marker
- CTA: Clear next step

STRUCTURE B: Story–Based

Best for: Nurture emails, personal brand, building connection

- Hook: Start with a relatable micro–story (3–5 sentences)
- Lesson: What you learned or realized
- Application: How this applies to their situation
- Bridge: Connect to your offer/CTA naturally
- CTA: One clear action

STRUCTURE C: Value–First

Best for: Newsletter–style emails, nurture sequences

- Opening: Promise quick value
- Value delivery: Give 3–5 actionable tips, insights, or ideas
- Soft transition: "If you want to go deeper..." or "This reminds me..."
- CTA: Offer next step (resource, product, content)

STRUCTURE D: Objection–Crusher

Best for: Mid–sequence sales emails, skeptical audience

- Opening: Acknowledge the hesitation ("I know what you're thinking...")
- Address objections: Tackle 2–3 objections head-on
- Reframe: Show why the objection isn't actually a barrier
- Social proof: Show others overcame the same hesitation
- CTA: Lower–friction version of main ask

Write the full email body including:

- Natural, conversational tone (write like you talk)
- Short paragraphs (2–3 sentences max)
- One clear idea per paragraph
- Subheadings if email is longer than 300 words
- Bold or **italics** for emphasis (use sparingly)
- Bullet points if listing 3+ things

4. CALL TO ACTION

Write 3 CTA button/link options:

- ****Direct CTA****: **[Clear, action-oriented, no friction]**
- ****Curiosity CTA****: **[Benefit-focused, creates gap]**
- ****Low-commitment CTA****: **[Softer ask, less pressure]**

Place the CTA:

- Primary CTA: **[Where in email — middle, end, or both?]**
- Text link vs. button: **[Recommendation based on email type]**

5. P.S. SECTION

Write a P.S. that does ONE of these:

- Reinforce urgency/scarcity
- Add social proof (testimonial, result, stat)
- Address final objection
- Add bonus or incentive
- Create FOMO

6. EMAIL OPTIMIZATION CHECKLIST

- ****From name****: [Your name / Brand name / "Name from Brand" — recommend best option]
- ****Preview text optimized****: Complements subject line, doesn't repeat it
- ****Mobile-friendly****: Short paragraphs, scannable, CTA easy to tap
- ****Single goal****: Email has ONE clear action (not multiple CTAs competing)
- ****Link ratio****: [# of links — don't overdo it]
- ****Spam trigger check****: Flag any risky words/phrases

7. A/B TEST RECOMMENDATION

Suggest one element to A/B test:

- Subject line test: [Which 2 subject lines to test + why]
- OR CTA test: [Which CTA variation to test + hypothesis]
- OR Structure test: [Test story-based vs. benefit-driven open]

8. FOLLOW-UP STRATEGY

If this email is part of a sequence:

- What should the next email do if they DON'T open/click?
- What should the next email do if they DO click but don't convert?
- When to send follow-up: [Hours/days after this one]

Write this email so it feels human, builds trust, and makes the click feel like the obvious next step.

WHEN TO USE

Use this when writing any promotional or conversion-focused email and you want a strategic structure that handles psychology, copywriting, and optimization instead of just winging it with a "Hey, check this out" message.

PRO TIP

Always specify the recipient's awareness level (unaware/problem-aware/solution-aware) — this determines whether you need to educate, agitate, or just present the offer.

Landing Page Copy Blueprint

You are a conversion-focused landing page copywriter who has optimized hundreds of pages that convert cold traffic into customers.

I need complete landing page copy.

Landing Page Details:

- What you're selling: **[PRODUCT / SERVICE / OFFER]**
- Price: **[\$X / \$X/month / Free + upsell / High-ticket \$\$\$\$]**
- Target audience: **[WHO — be specific about demographics, pain points, goals]**
- Traffic source: **[Paid ads / Email list / Social media / Organic search / Webinar / Other]**
- Visitor awareness level: **[Cold traffic / Warm audience / Hot leads / Past customers]**
- Conversion goal: **[Purchase / Book call / Start trial / Download / Register]**

Offer Details:

- Main benefit/outcome: **[The #1 transformation or result]**
- Unique mechanism: **[What makes your approach different/better/new]**
- Time to result: **[How quickly do they see outcomes]**
- Key features: **[List 3-5 core features/components]**
- Main objections: **[List 3 reasons someone wouldn't buy]**
- Guarantee/risk reversal: **[Money-back / Free trial / Guarantee — if applicable]**

Create complete landing page copy with these sections:

1. HEADLINE (Above the fold)

Write 5 headline options using different frameworks:

- ****Outcome-focused****: **[Achieve X without Y in Z timeframe]**
- ****Problem-focused****: **[Finally, a solution to X that doesn't require Y]**
- ****Contrarian****: **[Forget X. Here's what actually works.]**
- ****Specificity****: **[How [Specific Person] achieved [Specific Result] using [Method]]**
- ****Direct benefit****: **[Get X. Even if Y.]**

Pick the top 2 and explain why they'll work for this audience.

2. SUBHEADLINE (Amplify the headline)

For each headline, write a supporting subheadline that:

- Adds clarity or specificity
- Addresses the "for whom" (if not in headline)
- Reinforces the main benefit
- Keeps it under 20 words

3. HERO SECTION CTA

- Primary button text: **[3 options — action-focused, benefit-focused, curiosity-focused]**
- Supporting text under button: **[Trust signal, guarantee, or friction-reducer]**
- Placement: **[CTA before features / After one proof point / After value stack]**

4. OPENING SECTION (The hook)

Choose ONE framework:

Option A — Problem Agitation:

- Describe the current frustration (2–3 sentences that create "yes, that's me")
- Agitate why current solutions fail
- Hint at what's possible with a better way

Option B — Aspirational Future:

- Paint the picture of life after using your solution
- Contrast with current reality
- Introduce your product as the bridge

Option C — Credibility-First:

- Lead with proof (result, testimonial, stat)
- Establish authority quickly
- Transition to what you're offering

Write the full opening section (150–250 words).

5. BENEFITS SECTION (Not features — outcomes)

List 3–5 benefits using this structure for each:

[Benefit Headline — The outcome]

2–3 sentences explaining what this means for them and why it matters. Focus on emotional or practical impact, not technical details.

Optional: Include an icon or visual suggestion for each benefit.

6. HOW IT WORKS (Process/Method)

Break your solution into 3–5 simple steps:

Step 1: [Action-oriented headline]

1–2 sentences describing this step in plain language.

[Repeat for each step]

End with: "That's it. [Outcome] in [timeframe]."

7. SOCIAL PROOF SECTION

Choose the strongest proof type for your offer:

- ****Testimonials****: Write a framework for 3–5 testimonials (what each should emphasize: before/after, objection overcome, unexpected benefit, speed of results, specific outcome)
- ****Case study****: Outline one detailed case study (who, starting point, what they did, result, timeline)
- ****Stats/numbers****: [X customers, Y average result, Z% success rate]
- ****Logos****: "As seen in / Trusted by" — suggest placement
- ****Video testimonial****: Suggest prompt for customer to answer

8. OBJECTION HANDLING

Address 3–5 objections using this format:

[Objection as a question]

[2–3 sentence answer that reframes or eliminates the objection]

Example:

"Will this work if I'm just starting out?"

Absolutely. This is specifically designed for beginners — no prior experience needed. Our step-by-step system guides you through each stage, and you'll have support along the way.

9. FEATURES (If applicable)

Only include if your audience needs technical detail:

- List 5–10 features as bullet points
- Each feature: **[Feature name]** — **[What it does for them in plain language]**
- Keep this section scannable

10. GUARANTEE / RISK REVERSAL

Write copy that makes the decision feel low-risk:

- State the guarantee clearly (money-back period, what's covered)
- Explain the process (how to get refund, no hoops)
- Reframe the risk: "The only risk is staying stuck with **[current problem]**"

11. URGENCY / SCARCITY (If applicable)

If you have genuine urgency:

- Explain what expires (price increase, bonus, spots, access)
- State the deadline clearly
- Add a countdown timer suggestion: **[Yes/No]**

If no urgency:

- Create opportunity cost framing: "Every day without this = **[cost of inaction]**"

12. FINAL CTA SECTION

Write a closing section that includes:

- Recap of core benefit (1 sentence)
- CTA button text (action-focused)
- Supporting text (price, guarantee, next step)
- Final push: One sentence addressing hesitation

Example:

"Get instant access to **[Product]** and start **[achieving outcome]** today."

[BUTTON: Get Started Now]

One-time payment of \$X. 30-day money-back guarantee.

"Join **[X]** others who've already transformed **[area of life]**."

13. FAQ SECTION

Write 5–7 FAQs that address:

- How it works (mechanics)
- Who it's for (qualification)
- Technical questions (access, format, delivery)
- Guarantee/refund
- Results timeline
- Comparison to alternatives

14. PAGE STRUCTURE RECOMMENDATIONS

- Optimal page length: **[Short-form 1000 words / Mid-form 2000 words / Long-form 3500+ words]**
- CTA placement: **[How many CTAs + where]**
- Image/video suggestions: **[Hero image, product demo, testimonial photos, process visuals]**
- Design emphasis: **[Trust signals to highlight, sections to make visually distinct]**

15. A/B TEST IDEAS

Suggest 3 high-impact elements to test:

- Headline: **[Test outcome-focused vs. problem-focused]**

- CTA: **[Test button copy variation]**

- Social proof: **[Test testimonial placement or type]**

Write this landing page copy so it flows naturally, builds trust progressively, and makes saying yes feel like the obvious choice.

WHEN TO USE

Use this when building any landing page for a product, service, or lead magnet and you want conversion-focused copy that handles psychology, objections, and structure instead of generic "Buy Now" pages.

PRO TIP

Always fill in the "visitor awareness level" — cold traffic needs more education and trust-building, while warm audiences can skip straight to benefits and CTA.

Storytelling Framework Activator

You are a storytelling strategist who helps turn ideas, experiences, and messages into compelling narratives that resonate with audiences.

I want to tell a story, but I need help structuring it so it's actually engaging and makes a point.

Story Context:

- What happened (raw story): **[Describe the event, experience, or idea in 2–5 sentences]**
- The point/lesson: **[What should the audience take away from this story?]**
- Intended audience: **[Who is this story for?]**
- Where I'll tell it: **[Social post / Email / Blog post / Video / Presentation / Sales page / About page]**
- Desired length: **[Short 200 words / Medium 500 words / Long 1000+ words]**
- Emotional tone: **[Inspirational / Vulnerable / Humorous / Cautionary / Motivational / Reflective]**

Choose ONE storytelling framework that fits best, then write my story using that structure:

FRAMEWORK 1: THE HERO'S JOURNEY (Transformation story)

Best for: Personal growth stories, founder stories, overcoming-challenges narratives

Structure:

1. ****Ordinary World****: Where I started (the "before" state)
2. ****Call to Adventure****: What disrupted the status quo (problem, opportunity, realization)
3. ****Refusal of the Call****: Initial resistance, doubt, fear, or failure
4. ****Mentor/Discovery****: What helped me (person, insight, tool, realization)
5. ****Crossing the Threshold****: The moment I committed to change
6. ****Tests & Challenges****: Obstacles faced, lessons learned
7. ****The Ordeal****: The hardest moment or biggest challenge
8. ****Transformation****: What changed internally
9. ****Return with the Gift****: The "after" state + what I learned
10. ****Lesson for the audience****: How they can apply this

FRAMEWORK 2: BEFORE-AFTER-BRIDGE (Problem-solution story)

Best for: Product stories, case studies, testimonial-style narratives

Structure:

1. ****Before****: Paint the pain — what life was like before (specific, relatable struggles)
2. ****The Breaking Point****: The moment I knew something had to change
3. ****Discovery****: How I found the solution (the "bridge")
4. ****Implementation****: What I actually did (the process)
5. ****After****: The results, transformation, new reality (concrete, specific)
6. ****The Shift****: What changed beyond the surface outcome (mindset, confidence, etc.)
7. ****Lesson****: What I now know that I didn't before
8. ****Invitation****: How the audience can experience similar results

FRAMEWORK 3: THE STAKES STORY (Tension-driven narrative)

Best for: High-stakes moments, decision-making stories, lessons learned from mistakes

Structure:

1. **Setup**: Establish the normal situation
2. **Inciting Incident**: Something goes wrong or a big decision appears
3. **Rising Stakes**: Why this matters — what's at risk
4. **The Decision Point**: The moment of choice (include internal conflict)
5. **The Action**: What I decided to do
6. **The Consequence**: What happened as a result (good or bad)
7. **The Reflection**: What I learned or would do differently
8. **The Takeaway**: What this means for the audience

FRAMEWORK 4: THE FAILURE-TO-INSIGHT STORY (Vulnerable, lesson-driven)

Best for: Founder stories, thought leadership, building trust through vulnerability

Structure:

1. **The Mistake**: What I got wrong (be specific and honest)
2. **The Context**: Why I thought it was the right move at the time
3. **The Fallout**: What happened as a result (consequences, feelings, impact)
4. **The Realization**: The moment I understood what went wrong
5. **The Lesson**: What I learned from the failure
6. **The Change**: What I do differently now
7. **The Proof**: Evidence that the new approach works
8. **The Invitation**: How the audience can skip the mistake and go straight to the lesson

FRAMEWORK 5: THE CURIOSITY LOOP STORY (Hook-driven, social media optimized)

Best for: Social posts, threads, short-form content where you need to hook fast

Structure:

1. **The Hook**: Start with the most surprising/counterintuitive moment (drop them in mid-action or mid-realization)
2. **The Rewind**: "Let me back up..." (quickly establish context)
3. **The Build**: Short, punchy sentences that build tension or curiosity
4. **The Payoff**: Resolve the loop opened in the hook
5. **The Twist** (optional): Add an unexpected element
6. **The Lesson**: One clear, memorable takeaway
7. **The Application**: How they can use this

FRAMEWORK 6: THE OBSERVATION-INSIGHT STORY (Thought leadership)

Best for: Thought leadership, industry commentary, perspective pieces

Structure:

1. **The Observation**: Something I noticed (trend, pattern, anomaly)
2. **Why It Matters**: The significance others might miss
3. **The Deeper Layer**: What this reveals about a bigger truth
4. **The Analogy** (optional): Compare to something unexpected to illustrate the point
5. **The Implication**: What this means going forward
6. **The Contrarian Take** (if applicable): Why conventional wisdom is wrong

7. **The Actionable Shift**: What the audience should do with this insight

Now, write my story using the framework you chose:

- Use the structure as a guide but make it flow naturally (don't label each section)
- Write in first person ("I") to create intimacy
- Use specific details (names, numbers, places, exact moments) — specificity creates believability
- Include dialogue if it adds to the story
- Use sensory details (what I saw, felt, heard) to make scenes vivid
- Vary sentence length (short sentences for impact, longer for flow)
- End with a clear takeaway the audience can remember and apply

After writing the story, provide:

1. **Hook options (first line)**: Give me 3 alternative opening sentences
2. **Best platform for this story**: Where this narrative style will perform best
3. **Engagement prompt**: A question or CTA to add at the end to drive comments/replies
4. **Alternate angle**: One way I could retell this same story with a different emphasis

Make this story feel authentic, engaging, and purposeful — not like a random anecdote.

WHEN TO USE

Use this when you have an experience, lesson, or message you want to share but don't know how to structure it into a compelling narrative that actually lands instead of rambling.

PRO TIP

If you're not sure which framework fits your story best, describe your raw story to the AI and ask "which storytelling framework would work best for this?" before requesting the full structured version.

Content Calendar Architect

You are a content strategist who builds data-driven content calendars that balance consistency, audience needs, and business goals.

I need a complete content calendar.

Calendar Details:

- Timeframe: [1 week / 2 weeks / 1 month / Quarter]
- Platform(s): [Blog / Instagram / LinkedIn / Twitter/X / YouTube / TikTok / Email / Multiple]
- Posting frequency: [Daily / 3x per week / Weekly / Custom schedule]
- Current audience size: [Starting from zero / Small <1K / Growing 1K–10K / Established 10K+]

Business Context:

- What I do/sell: [YOUR BUSINESS/PRODUCT/SERVICE]
- Target audience: [WHO + THEIR MAIN PAIN POINTS]
- Business goals: [Grow audience / Drive traffic / Generate leads / Sell product / Build authority / Multiple]
- Brand voice: [Describe in 3–5 adjectives]

Content Themes I Talk About:

1. [THEME 1 — e.g., productivity, marketing tips, founder journey, etc.]
2. [THEME 2]
3. [THEME 3]

[Add more themes if applicable]

Constraints:

- Time available for content creation: [Hours per week]
- Content creation strengths: [Writing / Video / Design / Speaking / Stories]
- Resources: [Solo / Small team / Designer available / Video editor / AI tools]

Create a strategic content calendar with these components:

1. CONTENT PILLARS (Strategic themes)

Based on my business and audience, define 3–5 content pillars:

For each pillar:

- ****Pillar name****: [The theme]
- ****Purpose****: [What this pillar accomplishes — education / engagement / authority / conversion]
- ****Audience benefit****: [What they get from this type of content]
- ****Posting frequency****: [% of total content — e.g., 40% educational, 30% engaging, 20% promotional, 10% personal]
- ****Content types that work****: [Formats that fit this pillar]

2. CONTENT MIX FORMULA

Break down the ideal content ratio:

- ****Educational/Value**** (teach, inform, help): X%
- ****Engaging**** (questions, polls, relatable, entertaining): X%

- ****Inspirational**** (stories, wins, motivation): X%
- ****Promotional**** (sell, CTA, lead gen): X%
- ****Personal**** (behind-the-scenes, founder story, brand building): X%

Explain why this mix works for my goals and audience.

3. COMPLETE CALENDAR

Create a day-by-day content plan in this format:

[Day of Week] — [Date]

Platform: **[Where to post]**

Content Pillar: **[Which theme]**

Content Type: **[Post format — thread, carousel, video, article, story, etc.]**

Topic/Angle: **[Specific topic + the unique angle or hook]**

Goal: **[What this post should accomplish]**

CTA: **[What action you want the audience to take]**

Content Brief (2–3 sentences):

[Quick description of what this piece covers and why it matters]

Hook/Headline ideas:

- **[Option 1]**
- **[Option 2]**

Engagement strategy: **[How to encourage comments/shares — question to ask, controversial element, interactive component]**

[Repeat for each day in the calendar]

4. CONTENT BATCHING STRATEGY

Group similar content types together for efficient creation:

- ****Batch 1**** — **[Content type]**: Create **[Number]** pieces in one session
- Suggested time block: **[Day/time]**
- What to prepare: **[Research, outlines, visuals needed]**
- ****Batch 2**** — **[Content type]**: Create **[Number]** pieces in one session
- Suggested time block: **[Day/time]**
- What to prepare: **[Research, outlines, visuals needed]**

[Continue for all content types]

5. CONTENT REPURPOSING MAP

Show how to turn one piece of core content into multiple posts:

Core Content: **[Blog post / Video / Newsletter]**

- Platform 1: **[How to adapt it]**
- Platform 2: **[How to adapt it]**
- Platform 3: **[How to adapt it]**

Example:

Core Content: 2000-word blog post

- Twitter: Pull 5 key insights, turn into thread

- LinkedIn: Rewrite intro + 3 main points as text post
- Instagram: Create 8-slide carousel with main takeaways
- Email: Send as newsletter with CTA to full post

6. TRENDING & TIMELY CONTENT SLOTS

Reserve [X] slots per week/month for:

- Industry news reactions
- Trending topics
- Seasonal/holiday content
- Real-time engagement opportunities

Suggest how to identify and jump on these opportunities.

7. METRICS TO TRACK

For each content type/pillar, identify:

- **Primary metric**: [Engagement rate / Reach / Clicks / Conversions]
- **Secondary metric**: [Saves / Shares / Comments / Profile visits]
- **Success threshold**: [What "good performance" looks like]

Weekly review questions:

- What content performed best? Why?
- What underperformed? What can I learn?
- What topic/format should I do more of?
- What should I stop doing?

8. CONTENT CREATION WORKFLOW

Break down the weekly process:

Monday: [Task — e.g., batch write 5 captions, schedule posts]

Tuesday: [Task]

Wednesday: [Task]

Thursday: [Task]

Friday: [Task — e.g., analyze metrics, plan next week]

9. EMERGENCY CONTENT BANK

Create a list of 10–15 "evergreen" content ideas I can pull from when:

- I'm too busy to create something new
- Planned content falls through
- I need to fill a gap quickly

Format: [Topic + Hook + Platform]

10. GROWTH MILESTONES

Set realistic goals for this calendar period:

- Follower/subscriber growth target: [Number or %]
- Engagement rate target: [%]
- Traffic/conversion goal: [Number]
- Content consistency goal: [X posts without missing a day]

What to adjust if I'm behind: [Specific changes to make]

What to double down on if I'm ahead: [How to capitalize on momentum]

Make this calendar strategic, realistic, and specific enough that I can execute it without decision fatigue every day.

WHEN TO USE

Use this when planning your content for a week, month, or quarter and you want a strategic calendar that balances audience value, consistency, and business goals instead of posting randomly whenever you feel inspired.

PRO TIP

After getting the calendar, ask the AI to "identify the 3 highest-leverage pieces of content in this calendar and explain why they matter most" so you know where to focus your best effort.

Authority Article Outliner

You are a thought leadership strategist who helps experts turn ideas into comprehensive, authoritative articles that position them as industry leaders.

I want to write an in-depth authority article (2000–5000+ words) that establishes my expertise and becomes a reference piece in my industry.

Article Context:

- Topic: **[THE BIG IDEA OR SUBJECT]**
- My unique angle/thesis: **[What's my contrarian take, new framework, or fresh perspective?]**
- Target audience: **[WHO — be specific about their role, experience level, problems]**
- What they currently believe: **[Conventional wisdom or status quo thinking on this topic]**
- What I want them to believe after reading: **[The mental shift or new understanding]**

My Expertise:

- Background/credentials: **[Your experience, results, or authority on this topic]**
- Original research/data: **[Do you have proprietary data, case studies, or unique insights?]**
- What makes me qualified to write this: **[Why should they trust you?]**

Article Goals:

- Primary goal: **[Establish authority / Get backlinks / Rank for [keyword] / Generate leads / Change industry thinking]**
- Desired outcome: **[What should happen after someone reads this? Share it? Cite it? Hire you? Change their approach?]**

Create a comprehensive authority article outline with these sections:

1. ARTICLE TITLE

Give me 5 title options that balance authority + curiosity:

- ****Definitive Guide format****: **[The Complete Guide to X: Everything You Need to Know About Y]**
- ****Contrarian format****: **[Why Everything You Know About X Is Wrong]**
- ****Framework format****: **[The [Your Name/Number] Framework for X]**
- ****Future-focused format****: **[The Future of X: What [Industry] Gets Wrong About Y]**
- ****Data-driven format****: **[We Analyzed [Number] [Things] — Here's What Actually Drives X]**

Recommend which title will get the most traction for your goals.

2. EXECUTIVE SUMMARY (100–150 words)

Write a standalone summary that:

- States your main argument/thesis clearly
- Previews your key findings or framework
- Hints at why conventional wisdom is incomplete
- Makes a bold claim worth exploring

This summary should work as a LinkedIn post or tweet thread on its own.

3. OPENING SECTION (300–500 words)

The Hook (first 2–3 sentences):

Start with one of these high-impact openings:

- A surprising statistic that challenges assumptions
- A story that illustrates the problem vividly
- A provocative question that forces self-reflection
- A bold claim that demands explanation

The Problem (establish what's broken):

- Describe the current state (what's not working)
- Explain why this matters (stakes, consequences)
- Address why existing solutions fall short

The Promise (what this article delivers):

- Your unique thesis or framework
- What the reader will understand by the end
- Why this perspective is different/better

Credibility (why trust you):

- Briefly establish your authority
- Mention data, research, or experience backing your claims

Write the full opening section.

4. MAIN BODY STRUCTURE

Organize into 5–8 major sections (H2s). For EACH section:

H2: [Section Headline — make it a clear, compelling statement]

Purpose of this section: [What this section proves or explains]

Key points to cover:

- [Point 1 — with supporting evidence type: data, example, case study]
- [Point 2]
- [Point 3]

Subsections (H3s if needed):

- H3: [Subpoint headline]
- What to cover: [Details]

Evidence to include:

- Data point or stat: [What to cite]
- Example or case study: [Real-world application]
- Visual: [Chart, diagram, or infographic suggestion]

Transition to next section: [How does this section set up the next one?]

Word count target: [X words]

[Repeat for each major section]

Section organization should follow ONE of these proven structures:

Option A — Problem → Solution Architecture:

1. The Problem (what's broken)
2. Why Current Solutions Fail (debunk alternatives)

3. A Better Framework (introduce your approach)
4. How It Works (break down your system)
5. Proof It Works (data, case studies, results)
6. How to Implement (practical application)
7. Common Mistakes to Avoid
8. What This Means Going Forward (implications)

Option B — Thesis-Defense Architecture:

1. The Conventional Wisdom (what everyone believes)
2. Why That's Incomplete (poke holes)
3. The Missing Piece (your insight)
4. The Evidence (research, data, case studies)
5. Real-World Applications (how this plays out)
6. Counter-Arguments Addressed (preempt objections)
7. Implications (what changes if you're right)
8. What To Do Now (actionable next steps)

Option C — Framework Introduction Architecture:

1. The Problem This Framework Solves
2. How Most People Get This Wrong
3. Introducing **[Your Framework Name]**
4. Component 1 of the Framework (deep dive)
5. Component 2 of the Framework
6. Component 3 of the Framework
7. How the Components Work Together
8. Implementation Guide
9. Case Studies / Proof
10. Measuring Success

Choose the structure that fits your article best.

5. AUTHORITY-BUILDING ELEMENTS

Throughout the article, include:

Original Research/Data:

- **[Describe any proprietary data, surveys, or analysis you can include]**
- How to present it: **[Chart type, key insight to highlight]**

Expert Quotes:

- **[Suggest 2-3 types of experts to quote and what perspective each adds]**

Case Studies:

- **[Outline 1-3 case studies: Who, situation, action, result, lesson]**

Visual Assets:

- Custom framework diagram: **[What to illustrate]**
- Data visualization: **[What to chart]**
- Comparison table: **[What to compare]**

6. CONTRARIAN/BOLD TAKES

Identify 3–5 places in the article to make bold, defensible claims:

- **[Claim 1]: [The contrarian take]** — Back it up with: **[Evidence type]**
- **[Claim 2]: [The provocative statement]** — Support with: **[Example/data]**

These create shareability and debate.

7. CONCLUSION (200–300 words)

Write a conclusion that:

- Restates your main thesis (don't just repeat the intro)
- Synthesizes key insights into one big-picture takeaway
- Addresses "what this means" (implications for the industry/reader)
- Issues a challenge or call to action
- Leaves them with a memorable closing thought

8. CALLS TO ACTION

Suggest CTA placement:

- ****Soft CTAs**** (mid-article): **[Subscribe to newsletter / Download related resource / Read related article]**
- ****Primary CTA**** (end of article): **[What's the main action? Book call? Download tool? Join community?]**

Write the exact CTA copy for each.

9. METADATA & DISTRIBUTION

SEO Optimization:

- Primary keyword: **[If SEO is a goal]**
- Meta description: **[155 characters]**
- URL slug: **[Suggested path]**

Distribution Strategy:

- Email teaser: **[Write 2–3 sentence teaser for email list]**
- Social posts: **[3 different angles to promote this article on social media]**
- Outreach targets: **[Who in your industry should you send this to? Why would they care/share?]**

10. CREDIBILITY CHECKLIST

Before publishing, verify:

- **[]** All claims are backed by data, examples, or logical reasoning
- **[]** You've cited sources for any external data/quotes
- **[]** You've included at least one original insight not found elsewhere
- **[]** Your bio/credentials are clearly stated
- **[]** The article passes the "would an expert in this field respect this?" test
- **[]** There are no logical gaps or unsupported leaps

11. AMPLIFICATION STRATEGY

After publishing, how to maximize reach:

- ****Week 1****: **[Share on X platforms, email to Y people, post in Z communities]**
- ****Week 2–4****: **[Repurpose into A, B, C formats]**
- ****Ongoing****: **[How to keep this article relevant — update with new data, link from future content]**

Backlink Outreach:

- **[Identify 5–10 sites that would benefit from linking to this]**
- **[Write outreach template for each]**

12. SUCCESS METRICS

How to measure if this article accomplished its goal:

- Traffic: [Target pageviews in first 30/90 days]
- Engagement: [Time on page, scroll depth, social shares]
- Conversions: [Leads, email signups, backlinks, speaking invites]
- Authority: [Cited by others, referenced in industry conversations]

Make this outline so detailed and strategic that the actual writing becomes the easy part.

WHEN TO USE

Use this when you want to write a comprehensive, authoritative article that establishes your expertise and becomes a go-to resource in your industry instead of writing another forgettable blog post.

PRO TIP

After getting the outline, ask the AI to "identify the 3 most important sections where I need to bring my absolute best thinking and unique insights" so you know where to focus your deepest effort.

CHAPTER 3

Coding Assistant Prompts

12 Prompts

Rubber Duck Debugger

You are an expert debugging partner who asks clarifying questions before jumping to solutions.

I'm stuck on a bug. Here's what's happening:

Expected behavior: **[What should happen]**

Actual behavior: **[What's actually happening]**

Code snippet: **[Paste the relevant code]**

Error message (if any): **[Exact error]**

What I've tried: **[List everything you've attempted]**

Before suggesting fixes:

1. Ask me 3 clarifying questions about my setup, data, or assumptions
2. Identify what I might be misunderstanding about how the code works
3. Point out any debugging steps I haven't tried yet

Then walk me through the most likely causes, starting with the simplest explanation. Teach me how to think about this type of bug, not just how to fix this specific instance.

WHEN TO USE

When you've been staring at a bug for 30+ minutes and need a fresh perspective that helps you learn, not just copy-paste a fix.

PRO TIP

The "what I've tried" section is critical — it prevents the AI from suggesting things you've already done and forces better reasoning about root causes.

Code Review Partner

You are a senior engineer conducting a thorough but constructive code review. Be direct about issues but explain the "why" behind each suggestion.

Review this code with focus on:

- **Correctness:** Logic errors, edge cases, potential bugs
- **Readability:** Naming, structure, clarity for future maintainers
- **Performance:** Obvious inefficiencies or bottlenecks
- **Security:** Common vulnerabilities for this type of code
- **Best practices:** Patterns specific to **[language/framework]**

Code to review:

~~~

**[Paste your code here]**

~~~

Context: **[What this code does and why it exists]**

Format your review as:

1. **Critical issues** (will break or create serious problems)
2. **Strong suggestions** (significantly improves quality)
3. **Nice-to-haves** (polish and consistency)
4. **What you did well** (be specific about good choices I made)

For each issue, show me the improved version inline. No vague advice — show me the exact code change.

WHEN TO USE

Before pushing code to a PR, especially when you don't have a senior engineer to review your work or you're working in an unfamiliar area.

PRO TIP

Add "Context" about what the code does — the AI will catch logical errors and missing edge cases it would otherwise miss.

Architecture Decision Helper

You are a pragmatic software architect helping me make a technical decision. I need to choose between options, and I want you to cut through the hype and focus on tradeoffs for MY specific situation.

Decision I need to make: [e.g., "Should I use REST or GraphQL for my API?"]

My context:

- **Project type:** [e.g., "SaaS MVP with 3-month timeline"]
- **Team size/skill:** [e.g., "Solo founder, intermediate with Node.js"]
- **Scale expectations:** [e.g., "100 users in 6 months, maybe 10k in 2 years"]
- **Existing stack:** [What you're already using]
- **Non-negotiables:** [Any constraints, like "must deploy on Vercel"]

Options I'm considering: [List 2-4 options]

For each option, tell me:

1. **Real-world tradeoff** — What will I regret in 6 months if I choose this?
2. **Complexity tax** — How much overhead does this add to my daily work?
3. **Escape hatch** — How hard is it to change this decision later?
4. **Bullshit filter** — Is this solving a problem I actually have, or a problem I might have someday?

End with your recommendation and a one-sentence reason why, based on my context.

WHEN TO USE

When facing architectural forks in the road (database choice, auth strategy, deployment approach) and you need to cut through blog post hype.

PRO TIP

Be brutally honest in "My context" — the AI will give you better advice if you admit you're a solo founder with limited time rather than pretending you're building for scale.

Refactoring Guide

You are a refactoring specialist. I have working code that's become messy, and I want to clean it up WITHOUT breaking it. Safety and incremental improvement are more important than perfection.

Code to refactor:

~~~

[Paste the messy code]

~~~

Why it needs refactoring: [e.g., "hard to add features," "duplicated logic," "confusing to read"]

Constraints:

- I need this to stay working — no risky rewrites
- [Any other constraints, like "can't change the public API"]

Give me a **step-by-step refactoring plan** where each step:

1. Is small enough to do in one sitting (15-30 minutes)
2. Keeps the code working after each step
3. Can be tested immediately
4. Builds on the previous step

For each step, show:

- **What to change** (exact before/after code)
- **Why this step** (what problem it solves)
- **How to verify** (how I know it still works)

Number the steps so I can do them one at a time over several days. Start with the highest-impact, lowest-risk changes first.

WHEN TO USE

When your code works but has become a mess, and you want to improve it gradually without rewriting everything or breaking functionality.

PRO TIP

Do one step, test it, commit it, then come back and ask for the next step — treating this as a multi-day project prevents scope creep and keeps your code working.

API Design Workshop

You are an API design expert helping me design endpoints that are intuitive, consistent, and hard to misuse.

API I'm designing:

[Describe what your API needs to do, e.g., "REST API for a project management tool where users can create projects, add tasks, assign tasks to team members, and track time"]

Key user workflows:

1. [e.g., "Create a project and immediately add 5 tasks to it"]
2. [e.g., "See all tasks assigned to me across all projects"]
3. [List 3-5 critical workflows your API must support well]

Technical context:

- **API style:** [REST / GraphQL / tRPC / other]
- **Auth approach:** [JWT / session / API keys]
- **Primary clients:** [Web app / mobile app / third-party integrations]

Design the endpoints (or GraphQL schema) that would support these workflows. For each endpoint, specify:

- **Path and method** (or query/mutation name)
- **Request format** (params, body, headers)
- **Response format** (structure + example)
- **Error cases** (what can go wrong and what error codes to return)

Then critique your own design:

- Are there consistency issues across endpoints?
- Which workflows require too many round trips?
- What will be annoying for frontend developers using this API?
- What's the most likely way someone will misuse or misunderstand this API?

WHEN TO USE

Before writing API code, when you need to design the interface that both frontend and backend developers will use for months or years.

PRO TIP

Start with workflows instead of resources — designing around "what users need to accomplish" leads to better APIs than designing around "what database tables I have."

Database Schema Designer

You are a database architect helping me design a schema that's normalized enough to avoid problems but practical enough to actually query.

What I'm building: [e.g., "Multi-tenant SaaS where companies can create projects, invite team members, and track tasks"]

Key entities and relationships:

[Describe in plain English, e.g., "A company has many users. A project belongs to a company and has many tasks. A task can be assigned to one user."]

Query patterns I'll need:

1. [e.g., "Show all tasks for a user across all their projects"]
2. [e.g., "Show project with all tasks and assigned users"]
3. [List 4–6 queries your app will run constantly]

Database: [PostgreSQL / MySQL / MongoDB / etc.]

Design the schema including:

1. **Tables/collections** with all fields and types
2. **Relationships** (foreign keys, junction tables)
3. **Indexes** for my query patterns
4. **Constraints** (unique, not null, defaults)

Then show me:

- **Example queries** for each query pattern (actual SQL/query language)
 - **Schema red flags** — what might cause problems at scale or with my query patterns?
 - **Migration order** — if I'm building this from scratch, what order should I create these tables?
- Optimize for simplicity and query performance for my specific patterns, not textbook normalization.

WHEN TO USE

At the start of a project or when adding a major new feature that needs new database tables — before you write migrations or models.

PRO TIP

Include "query patterns you'll need" to get indexes and schema design optimized for your actual use case, not theoretical best practices.

Test Suite Architect

You are a testing strategist helping me build a test suite that catches real bugs without becoming a maintenance nightmare.

Code to test:

~~~

[Paste the function, class, or module you want to test]

~~~

What this code does: [Brief description of purpose and behavior]

Testing framework: [Jest / Vitest / pytest / RSpec / etc.]

Design a test suite that covers:

1. **Happy path** — the main use case works as expected
2. **Edge cases** — empty inputs, nulls, boundary values, weird but valid data
3. **Error cases** — invalid inputs, missing data, things that should throw errors
4. **Integration points** — if this code calls external services, databases, or APIs, how do we mock/stub those?

For each test:

- Write the full test code (not pseudocode)
- Name tests clearly: "should [expected behavior] when [scenario]"
- Use **arrange-act-assert** structure with comments
- Show setup/teardown if needed (mocks, fixtures, DB state)

Then tell me:

- **What I'm NOT testing** and why (to avoid false confidence)
- **Brittle test warning** — which tests are most likely to break when I refactor, and how to make them more resilient
- **Test data strategy** — should I use fixtures, factories, or inline data, and why?

WHEN TO USE

When you know you should test something but don't know what scenarios to cover or how to structure the tests properly.

PRO TIP

Paste the actual code to test, not a description — you'll get runnable tests with proper assertions instead of generic examples.

Documentation Generator

You are a technical writer creating documentation that helps developers use my code without needing to read the implementation.

Code to document:

~~~

[Paste the function, class, API endpoint, or module]

~~~

Audience: [e.g., "Frontend developers using this API," "Future me in 6 months," "Open source contributors"]

Documentation style: [JSDoc / Docstring / Markdown / README section / etc.]

Create documentation that includes:

1. **One-line summary** — what this does in plain English
2. **Parameters/inputs** — what you pass in, types, required vs optional, what each parameter means
3. **Return value/output** — what you get back, type, structure
4. **Example usage** — real, copy-paste-able code showing the most common use case
5. **Edge cases/gotchas** — things that aren't obvious from the signature (e.g., "returns null if user not found, throws error if database unavailable")
6. **When to use this** — what problem this solves (helps people know if this is the right tool)

Documentation principles:

- Show, don't tell — examples over explanations
- Cover what the code does, not how it works internally
- Warn about things that will surprise developers
- No filler phrases like "this function is used to..." — just start with the verb

Write documentation that would make sense to someone who's never seen this codebase before.

WHEN TO USE

When you need to document a function, API, or module that others (or future you) will use — especially for shared utilities, public APIs, or open source.

PRO TIP

Specify your audience to get the right level of detail — docs for API consumers are very different from docs for library maintainers.

Performance Optimization Advisor

You are a performance optimization specialist. I have code that works but is too slow, and I need to make it faster without premature optimization or unreadable code.

Slow code:

~~~

[Paste the code that's slow]

~~~

Performance problem: [e.g., "Takes 3 seconds to load a page," "Uses 2GB memory with 10k records," "API endpoint times out with 100 concurrent users"]

Context:

- **Language/framework:** [e.g., "Node.js with Express," "Python with Django"]
- **Data volume:** [e.g., "10k records now, expecting 100k in 6 months"]
- **Environment:** [e.g., "Single server, 2GB RAM," "Serverless with 1GB memory limit"]

Analyze the performance issues:

1. **Bottleneck identification** — what's actually slow? (Don't guess — tell me how to measure/profile this)
2. **Quick wins** — what can I change in 30 minutes that will make the biggest difference?
3. **Proper solutions** — what's the right fix for this bottleneck? (Include code examples)
4. **Optimization priority** — rank improvements by impact vs effort
5. **When to stop** — how do I know when it's "fast enough" and I should move on?

For each optimization:

- Show the before/after code
- Explain WHY it's faster (what changes algorithmically or computationally)
- Estimate realistic improvement ("2x faster" not "much faster")
- Call out readability tradeoffs if the optimization makes code harder to understand

WHEN TO USE

When you have a confirmed performance problem (slow page load, API timeout, memory issue) and need to fix it without over-engineering.

PRO TIP

Include actual performance numbers ("takes 3 seconds") instead of "it's slow" — you'll get specific, measurable optimizations instead of generic advice.

Security Audit Checklist

You are a security engineer auditing my code for common vulnerabilities. Focus on practical, exploitable issues — not theoretical attacks that require NSA-level resources.

Code to audit:

~~~

[Paste the code handling sensitive operations: auth, data access, user input, file uploads, payments, etc.]

~~~

What this code does: [e.g., "Handles user login and session management," "Processes file uploads from users"]

Stack: [e.g., "Node.js / Express / PostgreSQL," "Python / Flask / SQLite"]

Audit for:

1. **Injection vulnerabilities** — SQL injection, NoSQL injection, command injection (show me where unsanitized input is used)
2. **Authentication/authorization flaws** — broken auth, missing permission checks, insecure session handling
3. **Data exposure** — sensitive data in logs, error messages, URLs, or responses
4. **Input validation** — missing validation, client-side only validation, type coercion issues
5. **Cryptography mistakes** — weak hashing, hardcoded secrets, insecure random generation
6. **Common framework vulnerabilities** — known issues in this specific stack

For each vulnerability found:

- **Severity**: Critical / High / Medium / Low
- **Attack scenario** — how would someone actually exploit this? (Be specific)
- **Fix** — exact code change to remediate (show before/after)
- **Why this matters** — what's the real-world impact if exploited?

Prioritize issues by: "How easy is this to exploit?" × "How bad is the impact?"

End with a **security checklist** of 5–7 things I should verify before deploying ANY code in this codebase.

WHEN TO USE

Before launching a feature that handles sensitive data (auth, payments, personal info, file uploads) or when security-reviewing existing code.

PRO TIP

Paste code that touches user input, auth, or sensitive data — generic code audits find generic issues, but specific code audits find exploitable vulnerabilities.

Git Commit Message Crafter

You are a Git historian who writes commit messages that future developers (including future me) will appreciate when debugging, reviewing history, or understanding why a change was made.

Changes I'm committing:

[Paste git diff, or describe the changes in detail]

Why I made this change: [e.g., "Fixed bug where users couldn't upload files over 5MB," "Refactored auth to prepare for OAuth"]

Write a commit message following this structure:

<type>: <short summary in present tense, 50 chars max>

<Blank line>

<Body: explain the what, why, and any important context.

Focus on WHY this change was needed and what problem it solves.

Wrap at 72 characters.>

<Blank line>

<Footer: breaking changes, issue references, or migration notes>

Types: `feat` (new feature), `fix` (bug fix), `refactor` (code change without behavior change), `perf` (performance), `docs`, `test`, `chore` (tooling, deps)

Commit message principles:

- Summary line completes: "If applied, this commit will ___"
- Body explains WHY, not WHAT (the diff shows what changed)
- Include consequences: "This fixes X but means Y will now..."
- Reference issues: "Closes #123" or "Related to #456"
- Warn about breaking changes explicitly

Give me 2 versions: a **minimal version** (just summary line) for small changes, and a **detailed version** (summary + body) for complex changes.

WHEN TO USE

When you've made a complex change and want a commit message that explains the why, or when you're terrible at writing concise, clear summaries.

PRO TIP

Paste your actual git diff to get a commit message that accurately describes your changes instead of what you think you changed.

Codebase Onboarding Guide

You are a senior developer creating an onboarding guide for a new team member (or future me) who needs to understand this codebase quickly.

Codebase context:

- **Project type:** [e.g., "SaaS web app," "REST API," "CLI tool"]
- **Tech stack:** [Languages, frameworks, databases, key libraries]
- **Repo structure:** [List main directories and what's in them, or paste output of ``tree -L 2``]

Key files/modules: [List 5–10 most important files with one-line descriptions]

How it works: [Describe the main flow: "User logs in → API authenticates → frontend fetches data → ..."]

Create an onboarding guide that covers:

1. **Mental model** — what is this application at a high level? (Explain in 2–3 sentences using an analogy if helpful)
2. **Architecture overview** — how are the pieces organized? (Frontend/backend split, microservices, monolith, etc.)
3. **Data flow** — trace a typical request from entry point to response (be specific: "Request hits ``api/routes/users.js``, calls ``getUserById()``, queries ``users`` table...")
4. **Where to find things** — if I need to change [common task], which files do I look at?
5. **Code conventions** — naming patterns, file organization, any non-obvious patterns used consistently
6. **Gotchas** — what's confusing or surprising about this codebase that a new person should know?
7. **How to run/test locally** — actual commands to get this running and verify it works
8. **First task recommendations** — suggest 2–3 small, self-contained tasks a new developer could tackle to learn the codebase (e.g., "Add a new field to the user profile")

Write this for someone technical but unfamiliar with this specific project. Prioritize practical navigation over completeness.

WHEN TO USE

When onboarding a new developer, returning to a project after months away, or trying to understand an unfamiliar codebase you just inherited.

PRO TIP

Use this prompt on your own codebase every few months and save the output — it forces you to document tribal knowledge and catches when your code has become confusing.

CHAPTER 4

Productivity Prompts

12 Prompts

Daily Battle Plan

You are my strategic operations officer. It's **[DAY OF WEEK]** and I have **[NUMBER]** hours of focused work time available today.

Here's what's on my radar:

- Active projects: **[LIST YOUR CURRENT PROJECTS]**
- Today's meetings/commitments: **[LIST FIXED COMMITMENTS]**
- Energy level: **[LOW/MEDIUM/HIGH]**
- Biggest current bottleneck: **[WHAT'S BLOCKING YOU]**

Create a battle plan for today that:

1. Identifies my ONE non-negotiable win (the thing that would make today successful even if nothing else gets done)
2. Sequences 3–5 concrete tasks in priority order, with estimated time blocks
3. Includes ONE proactive move (something not urgent but high-leverage)
4. Builds in buffer time and specifies what gets dropped if I'm running behind
5. Tells me what NOT to do today (what can wait until tomorrow or next week)

Format as a simple numbered action list. Be ruthlessly realistic about what's actually achievable. No motivational fluff—just tactical clarity.

WHEN TO USE Every morning before you open your inbox or Slack.

PRO TIP Run this for 5 days in a row and you'll develop an intuition for realistic daily scope—most people overestimate what they can do by 3x.

Goal Setting That Sticks

I want to set a goal that I'll actually achieve, not abandon in two weeks.

My goal (rough draft): **[YOUR GOAL]**

Why this matters to me: **[YOUR REAL REASON]**

Past goals I've abandoned: **[LIST 1-2 FAILED GOALS]**

My usual failure pattern: **[HOW YOU TYPICALLY QUIT]**

Act as a behavioral design expert. Redesign this goal using these principles:

1. Make it ridiculously specific (no room for interpretation)
2. Attach it to a daily or weekly action I can't miss (implementation intention)
3. Build in a forcing function (external accountability or automatic consequence)
4. Define the "minimum viable version" (what counts as success on a bad week)
5. Identify the exact moment I'll be most tempted to quit, and pre-install a response

Then create:

- A rewritten goal statement (one sentence, measurable, time-bound)
- The exact daily/weekly action required
- A forcing function recommendation
- A "bad week" minimum standard
- A quit-moment response plan

Be blunt about whether my original goal is realistic. If it's not, tell me a better version.

WHEN TO USE

When setting quarterly goals, New Year's resolutions, or any commitment longer than 2 weeks.

PRO TIP

The forcing function is the most important part—goals without external accountability die quietly.

Decision Clarity Engine

I'm stuck on a decision and need systematic clarity, not just gut instinct.

The decision: **[DESCRIBE THE CHOICE YOU'RE FACING]**

My options: **[LIST 2-5 OPTIONS]**

Context that matters:

- Current situation: **[RELEVANT BACKGROUND]**
- What I'm optimizing for: **[TIME/MONEY/GROWTH/FREEDOM/ETC]**
- What I'm afraid of: **[YOUR REAL FEAR]**
- Deadline to decide: **[WHEN YOU MUST CHOOSE]**

Act as a decision architect. Analyze this using:

1. ****Regret minimization:**** Which choice will I regret least in 10 years?
2. ****Reversibility test:**** Which decisions are reversible vs. one-way doors?
3. ****Opportunity cost:**** What am I giving up with each option?
4. ****Second-order effects:**** What happens AFTER the immediate consequence?
5. ****Hell Yeah or No:**** Which option makes me feel "hell yeah" vs. "I guess so"?

Output:

- A clear recommendation with reasoning
- The hidden costs I'm not seeing
- What would need to be true for the OTHER option to be better
- One question I should answer before deciding
- A deadline-forcing mechanism if I'm procrastinating

Be direct. If I'm overthinking an obvious choice, tell me.

WHEN TO USE For medium-to-large decisions where you're spinning in analysis paralysis for more than 2 days.

PRO TIP If you're still uncertain after this analysis, the decision probably doesn't matter as much as you think—flip a coin and commit.

Eisenhower Priority Matrix

I need to triage my workload using the Eisenhower Matrix (Urgent/Important framework).

Everything on my plate right now:

[DUMP YOUR ENTIRE TASK LIST—NO FILTERING, JUST BRAIN DUMP EVERYTHING]

Act as my strategic COO. Sort these into four categories:

Q1 – DO FIRST (Urgent + Important): Crises, deadlines, critical problems

Q2 – SCHEDULE (Not Urgent + Important): Strategy, planning, relationship-building, prevention

Q3 – DELEGATE (Urgent + Not Important): Interruptions, busy work, other people's priorities

Q4 – ELIMINATE (Not Urgent + Not Important): Time wasters, distractions, fake work

For each item, tell me:

- Which quadrant it belongs in (be honest, not nice)
- Why it's there (challenge my assumptions if I'm miscategorizing)
- For Q3: WHO could do this instead of me (be specific)
- For Q4: Permission to delete it entirely (no guilt)

Then create:

1. Today's must-do list (Q1 only)
2. This week's schedule blocks for Q2 work
3. A delegation script for the top Q3 item
4. A "stop doing" list (Q4 items I need to abandon)

Be ruthless. Most people's Q1 is actually Q3 in disguise.

WHEN TO USE

When you feel overwhelmed and everything seems urgent.

PRO TIP

If your Q1 quadrant has more than 3 items, you're in reactive mode—something in your system is broken.

Meeting Agenda That Respects Time

I need to run a meeting that doesn't waste anyone's time.

Meeting purpose: [WHAT YOU'RE TRYING TO ACCOMPLISH]

Attendees: [WHO WILL BE THERE]

Duration: [LENGTH IN MINUTES]

Current status: [RELEVANT CONTEXT PEOPLE SHOULD KNOW]

Create a battlefield-tested agenda using these principles:

1. **Desired outcome:** State the ONE thing that must happen for this meeting to be worth it
2. **Pre-work:** What must attendees read/prepare beforehand (make it optional or the meeting fails)
3. **Decision-making authority:** Who has final say if we disagree
4. **Timeboxes:** Strict minute allocations for each segment
5. **Parking lot protocol:** How we handle off-topic tangents

Format the agenda as:

- **Before the meeting:** Pre-work assignments with why each matters
 - **Minute O-X:** Segment-by-segment breakdown with time limits and owner
 - **Decision points:** Explicit moments where we commit to something
 - **End-of-meeting:** Who does what by when (action items with owners and dates)
 - **Cancellation criteria:** Under what condition should we NOT have this meeting
- Make it so tight that the meeting could run without me. No fluff, no "intros," no "how's everyone doing."

WHEN TO USE

Before scheduling any meeting with more than 2 people.

PRO TIP

Send this agenda 24 hours in advance and tell people "if you can't do the pre-work, don't attend"—watch your meeting quality 10x.

Weekly Review System

I need to run my weekly review. It's [DAY OF WEEK] and I'm reviewing the week of [DATE RANGE].

This week's data:

- Goals I set last week: [LIST THEM]
- What I actually accomplished: [HONEST LIST]
- Biggest win: [ONE THING]
- Biggest disappointment: [ONE THING]
- Time wasters: [WHAT DRAINED ENERGY WITHOUT RESULTS]
- Energy level overall: [1-10]

Act as my executive coach. Analyze this week across five dimensions:

1. **Execution score (0-10):** Did I do what I said I'd do? What's the pattern in my misses?
2. **Leverage audit:** Which activities produced 10x results? Which produced 0.1x?
3. **System failures:** What broke down? Was it willpower, process, or bad planning?
4. **Energy leaks:** What drained me that I should eliminate/delegate/redesign?
5. **Leading indicators:** Based on this week's actions, what results am I setting up for next month?

Then create:

- **Keep/Stop/Start:** One behavior in each category
- **Next week's focus:** My ONE non-negotiable priority
- **System tweak:** One small process improvement to implement
- **Celebration moment:** Why this week mattered (even if it felt like failure)

Be honest about patterns I'm not seeing. If I'm lying to myself about productivity, call it out.

WHEN TO USE

Every Friday afternoon or Sunday evening—consistency matters more than the day.

PRO TIP

Track your execution score over 12 weeks—if it's consistently below 7, you're overcommitting or underestimating task complexity.

Time Audit Analyzer

I want to know where my time ACTUALLY goes, not where I think it goes.

Time tracking data: **[PASTE YOUR CALENDAR EXPORT, TIME LOG, OR DETAILED BREAKDOWN OF LAST WEEK]**

If you don't have tracking data, estimate your last week:

- Sleep: **[HOURS]**
- Deep work (focused, hard thinking): **[HOURS]**
- Meetings: **[HOURS]**
- Email/Slack: **[HOURS]**
- Admin/operations: **[HOURS]**
- Breaks/rest: **[HOURS]**
- Commute: **[HOURS]**
- Personal/family: **[HOURS]**
- Wasted time (honest answer): **[HOURS]**

My role: **[YOUR JOB TITLE OR PRIMARY RESPONSIBILITY]**

What creates value in my role: **[THE ACTIVITIES THAT ACTUALLY MOVE THE NEEDLE]**

Act as a time management forensic analyst. Calculate:

1. ****Value time %:**** Hours spent on high-leverage work vs. total available hours
2. ****Interrupt tax:**** Time lost to context-switching and meeting recovery
3. ****Ghost work:**** Tasks I do regularly that have zero measurable impact
4. ****Margin vs. treadmill:**** How much time is reactive (emails, requests) vs. proactive (building, creating)
5. ****Misalignment cost:**** Hours spent on work that doesn't match my stated priorities

Then recommend:

- ****One thing to eliminate entirely**** (free up X hours/week)
- ****One thing to delegate or automate**** (specific tool or person)
- ****One process to batch**** (reduce context-switching)
- ****Ideal week template**** (reallocate time to match actual priorities)

Show me the brutal math. Don't soften the numbers.

WHEN TO USE

Quarterly, or whenever you feel busy but unproductive.

PRO TIP

Most people discover they spend <20% of their time on high-value work—the goal isn't perfection, it's moving that number to 40%.

Habit Design Lab

I want to build a new habit that actually sticks, not one that dies in 12 days.

Habit I want to build: **[BE SPECIFIC – "exercise" is too vague, "20 pushups before shower" is perfect]**

Why I want this: **[YOUR REAL REASON, NOT WHAT SOUNDS GOOD]**

Past attempts: **[WHAT YOU'VE TRIED BEFORE AND WHY IT FAILED]**

Current morning routine: **[WHAT YOU ALREADY DO EVERY DAY]**

Biggest obstacle: **[WHAT WILL MAKE YOU SKIP THIS]**

Act as a behavioral scientist specializing in habit formation. Design this habit using:

1. ****Trigger design:**** Anchor this habit to an existing behavior I never miss (implementation intention)
2. ****Friction removal:**** Eliminate every step between decision and action
3. ****Minimum viable habit:**** Make it so easy I'd be embarrassed NOT to do it
4. ****Streak tracking:**** Visible progress system (what gets measured gets managed)
5. ****Failure protocol:**** What I do when I miss a day (no shame, just system)

Output:

- ****Habit stack sentence:**** "After I **[EXISTING HABIT]**, I will **[NEW HABIT]** in **[LOCATION]**"
- ****Environment design:**** One physical change to make this automatic
- ****2-minute version:**** The embarrassingly easy version I do on bad days
- ****Tracking method:**** Specific tool or system (not just "track it")
- ****Reset ritual:**** Exactly what I do after missing a day (no guilt spiral)

Make this so small and specific that failure is nearly impossible. If I can't do this version, the habit is poorly designed.

WHEN TO USE

When starting any new daily or weekly behavior you want to maintain for 90+ days.

PRO TIP

The 2-minute version is the real habit—the full version is just a bonus you do when motivated.

Project Breakdown Engine

I have a big, vague project that feels overwhelming. I need to break it into concrete next actions.

Project name: [WHAT YOU'RE TRYING TO BUILD/ACCOMPLISH]

Success looks like: [DESCRIBE THE FINISHED STATE IN DETAIL]

Why this matters: [YOUR REAL MOTIVATION]

Current status: [WHAT'S BEEN DONE SO FAR, IF ANYTHING]

Deadline (if any): [DATE OR "NONE"]

Constraints: [TIME/BUDGET/SKILL LIMITATIONS]

Act as a project manager who specializes in execution, not planning theater. Break this down using:

1. **Outcome definition:** What does "done" mean? (Specific, measurable, binary yes/no)
2. **Reverse engineering:** Work backwards from done to now
3. **Critical path:** What must happen sequentially vs. what can be parallel
4. **First follower task:** The absolute next physical action I can take in under 30 minutes
5. **Forcing function:** External deadline or commitment device to prevent drift

Output format:

- **Phase 1:** [PHASE NAME] – Milestone: [WHAT'S TRUE WHEN THIS PHASE IS DONE]
- Task 1: [CONCRETE ACTION WITH VERB] – Time: [REALISTIC ESTIMATE] – Owner: [ME/SOMEONE ELSE]
- Task 2: [NEXT ACTION]...
- **Phase 2:** [NEXT PHASE]...

Then tell me:

- **The next 30-minute action:** What I should do immediately after reading this
- **The bottleneck:** What will slow this down or stop it completely
- **The simplification:** How I could achieve 80% of the value with 20% of the work
- **The accountability:** Who I should tell about this project and when to report progress

Be ruthlessly realistic about time estimates. Double whatever I think it will take.

WHEN TO USE At the start of any project larger than a single day's work.

PRO TIP If you can't identify the "next 30-minute action," the project isn't broken down enough—keep going until you have something you could start right now.

Delegation Framework

I need to delegate something I've been doing myself, but I don't know how to hand it off without it becoming a mess.

Task to delegate: [WHAT YOU CURRENTLY DO]

Who might do this: [TEAM MEMBER/VA/CONTRACTOR/UNKNOWN]

Why I've been doing it myself: [YOUR REAL REASON – CONTROL, SPEED, "EASIER THAN EXPLAINING"]

Current process: [HOW YOU DO IT NOW, STEP BY STEP IF POSSIBLE]

Acceptable quality bar: [WHAT "GOOD ENOUGH" LOOKS LIKE – BE HONEST]

Act as an operations consultant specializing in delegation. Create a handoff package:

1. **Task definition:** What this is and isn't (clear boundaries)
2. **Why it matters:** The outcome this task serves (context, not just instructions)
3. **Step-by-step SOP:** Detailed enough that someone could do it without asking questions
4. **Decision rights:** What they can decide alone vs. what needs my approval
5. **Quality checklist:** How they know they did it right before submitting
6. **Communication protocol:** When/how to update me (not constant check-ins)
7. **Failure recovery:** What to do if something goes wrong

Then answer:

- **First delegation:** Should I delegate the whole task or just one part first?
- **Training time:** Realistic estimate of how long to teach this (don't lowball it)
- **Tools needed:** What they need access to or what I need to set up
- **My ongoing role:** How much time I'll spend on this after handoff (be honest)
- **Trust threshold:** When I can stop reviewing their work on this task

Format as a Google Doc or Loom video script I can send. Make it so clear that questions are rare.

WHEN TO USE

Whenever you find yourself saying "it's faster if I just do it myself" for the third time.

PRO TIP

The rule of 3: if you've done something three times, document it and delegate it—your time is too valuable for repetitive work.

Energy Management Optimizer

I want to work WITH my energy patterns instead of fighting them.

Typical day timeline: [DESCRIBE YOUR CURRENT SCHEDULE]

Energy audit:

- Time I feel most mentally sharp: [TIME RANGE]
- Time I hit an energy wall: [TIME RANGE]
- Activities that energize me: [LIST THEM]
- Activities that drain me: [LIST THEM]
- Sleep schedule: [TYPICAL BEDTIME AND WAKE TIME]
- Current caffeine/break habits: [WHEN AND HOW MUCH]

Work I need to do:

- Deep thinking work: [TASKS REQUIRING FOCUS]
- Shallow/admin work: [TASKS THAT ARE EASIER]
- Creative work: [BRAINSTORMING, WRITING, DESIGNING]
- Communication work: [MEETINGS, EMAILS, CALLS]

Act as a performance coach who optimizes for energy, not just time. Design an energy-optimized day:

1. **Peak performance blocks:** When to schedule deep work (align with natural energy peaks)
2. **Recovery architecture:** Strategic breaks, not just "rest when tired"
3. **Batch scheduling:** Group similar tasks to reduce context-switching tax
4. **Energy drains first:** When to tackle the work you're avoiding
5. **Ultradian rhythm respect:** Work in 90-minute cycles, not 8-hour marathons

Create:

- **Ideal day template:** Hour-by-hour task alignment with energy patterns
- **Meeting boundaries:** When I accept meetings vs. when I decline
- **Afternoon slump strategy:** What to do when energy crashes (not just power through)
- **Weekly energy map:** Which days for focus vs. collaboration vs. admin
- **One experiment:** A single change to test this week to improve energy

Be specific about timing. "Morning" isn't helpful—"8:30–11:00 AM" is.

WHEN TO USE

When you notice you're most productive at certain times but your schedule doesn't reflect that.

PRO TIP

Protect your top 3 peak-energy hours like you'd protect your bank account—no meetings, no email, no exceptions.

Focus Session Designer

I need to get serious work done and I want to design the perfect focus session—environment, structure, and boundaries.

Work I'm doing: [SPECIFIC TASK OR PROJECT]

Estimated time needed: [YOUR GUESS]

Typical distractions: [WHAT USUALLY INTERRUPTS YOU]

Current environment: [WHERE YOU'LL WORK]

Time available: [HOW LONG YOU HAVE]

Act as a deep work architect. Design a focus session protocol using:

1. **Pre-session ritual:** 3-minute routine to signal "focus mode" to your brain
2. **Environment lockdown:** Specific apps to close, notifications to disable, physical changes
3. **Session structure:** Pomodoro-style time blocks with specific break activities
4. **Success definition:** What does "done" look like for this session (not the whole project)
5. **Escape hatch:** When it's okay to stop (avoid guilt spirals)

Create:

- **5-minute pre-game:** Exact steps to enter focus mode (make it a ritual)
- **Distraction blockers:** Apps, settings, physical environment changes (be specific)
- **Time blocks:** Work/break intervals optimized for this type of work
- **Progress markers:** Milestones to hit so I feel momentum
- **Post-session:** 2-minute cool-down and logging system (track what worked)

Then give me:

- **The countdown script:** Exact words to think/say when I'm about to start
- **Interrupt protocol:** What I do if someone/something interrupts mid-session
- **Failure case:** If I can't focus, when do I stop trying and reschedule
- **Celebration trigger:** How I reward my brain when the session is complete

Make this a system I can repeat, not a one-time motivational push. Treat focus like a skill, not willpower.

WHEN TO USE

Before any work session requiring more than 60 minutes of uninterrupted focus.

PRO TIP

The pre-session ritual is more important than the work itself—it trains your brain to enter focus mode on command like Pavlov's dogs.

CHAPTER 5

Social Media Prompts

12 Prompts

TikTok Script Machine

You are a viral TikTok scriptwriter who specializes in **[your niche/industry]**. I need a 45–60 second TikTok script about **[topic]**.

Required structure:

- ****Hook (0–3 seconds)****: Open with a pattern interrupt, bold claim, or burning question that stops the scroll
- ****Setup (4–15 seconds)****: Introduce the problem or stakes — why this matters to my audience
- ****Value Delivery (16–45 seconds)****: Deliver 3 actionable insights, surprising facts, or step-by-step instructions. Use numbered lists or visual metaphors.
- ****CTA (46–60 seconds)****: End with a clear next step — follow for part 2, comment your experience, or try this and report back

Additional requirements:

- Write in spoken language, not formal prose (use "you're" not "you are", sentence fragments are fine)
- Include **[VISUAL CUE]** markers where I should show text overlays, product demos, or B-roll
- Mark strategic pauses with "..." for comedic timing or emphasis
- Avoid cringe phrases like "let that sink in" or "wait for it"

My target audience: **[describe in detail — age, pain points, platform behavior]**

My brand voice: **[casual/expert/sarcastic/educational]**

Specific angle I want to take: **[contrarian/beginner-friendly/myth-busting/behind-the-scenes]**

WHEN TO USE

When you need a scroll-stopping video script that balances entertainment with genuine value, not just empty hooks.

PRO TIP

After getting the script, ask "What are 3 alternative hooks I could A/B test for this same script?" to maximize your first 3 seconds.

Twitter/X Thread Builder

You are a Twitter/X growth strategist who has written threads that earned 1M+ impressions. Write a high-performing thread about **[topic]** for my audience of **[target audience]**.

Thread Architecture:

Tweet 1 (Hook Tweet):

- Start with a bold claim, surprising statistic, or "I just learned..." moment
- Make it quotable and screenshot-worthy
- Include a clear promise of what the thread delivers
- End with "Here's what I learned:" or similar thread indicator
- NO generic openings like "A thread about..." or "Let's talk about..."

Tweets 2-8 (Value Tweets):

- One clear idea per tweet (no multi-part tweets)
- Use formatting: line breaks, bullet points with • or numbers
- Include at least 2 tweets with specific data, examples, or case studies
- Vary tweet structure: some short punchy claims, some mini-stories, some tactical how-tos
- Every tweet should work standalone if someone only reads that one

Final Tweet (CTA Tweet):

- Recap the core insight in one sentence
- Strong CTA: follow me for **[specific content promise]**, RT the first tweet if **[reason]**, or reply with **[engagement question]**
- Tag me back to the hook tweet with "If you found this valuable, start here:" + link to tweet 1

Constraints:

- Each tweet must be under 280 characters
- No emoji spam or cringe phrases
- Write like I've personally experienced this, not like I'm reporting on it
- Use "you" language to make it feel like a direct conversation

My unique angle or insight: **[what's your contrarian take, personal story, or proprietary framework?]**

Desired thread tone: **[tactical/storytelling/controversial/educational]**

WHEN TO USE

When you have a complex idea worth exploring but need it structured for maximum engagement and shareability on X.

PRO TIP

Request 3 alternative hook tweets at the end — the hook is 80% of your thread's success, so test multiple versions.

Instagram Carousel Creator

You are an Instagram content strategist specializing in high-engagement carousel posts. Create a 10-slide carousel about **[topic]** targeting **[audience]**.

Slide-by-slide breakdown:

Slide 1 (Cover/Hook):

- Headline: 6 words or less, bold claim or curiosity gap
- Subheadline: One line explaining what they'll learn
- Visual direction: **[describe the aesthetic — minimal text, bold typography, specific colors, etc.]**
- Must make someone think "I need to swipe to see this"

Slides 2-9 (Content Slides):

For each slide provide:

- Main text (20-30 words max per slide — Instagram users skim)
- Supporting detail or example (1-2 sentences)
- Visual suggestion **[icon, diagram, screenshot, chart, before/after, etc.]**

Structure the content as:

- **[Choose: numbered list / step-by-step guide / myth vs reality / before/after / mistakes to avoid / framework breakdown]**
- Each slide = one complete micro-idea
- Use consistent formatting across all slides for cohesion

Slide 10 (CTA Slide):

- Recap the core takeaway in 10 words or less
- Clear CTA: Save this for later, follow for **[specific content type]**, or share with someone who needs this
- Include a teaser for your next post or related content

Instagram Caption:

Write a 150-200 word caption that:

- Opens with a hook that reframes the carousel topic
- Expands on one slide with a personal story or deeper context
- Ends with an engagement question related to the content
- Includes 15 relevant hashtags (mix of high, medium, and niche-specific tags)

My brand aesthetic: **[minimal/bold/colorful/corporate/hand-drawn]**

My content goal: **[education/inspiration/engagement/sales]**

WHEN TO USE

When you need a carousel that people actually read through and save, not just scroll past after the cover slide.

PRO TIP

Ask for "3 alternative cover slide headlines" after receiving the carousel — test different curiosity angles to see what drives more swipes.

LinkedIn Thought Leadership Post

You are a LinkedIn ghostwriter who has written posts for executives that earned 100K+ impressions and led to inbound opportunities. Write a thought leadership post about **[topic/recent experience/industry trend]**.

Post Structure (1,200–1,800 characters):

Hook Paragraph (First 2 lines before "see more"):

- Open with a contrarian statement, personal vulnerability, or industry observation that challenges conventional thinking
- These 2 lines determine if anyone clicks "see more" — make them count
- Avoid: "I've been thinking about...", "Hot take:", or anything that sounds like you're trying to go viral

Story/Context (Middle section):

- Share a specific moment, conversation, or realization (use real details — numbers, names of tools, actual dialogue)
- Show your thinking process or what you got wrong before getting it right
- Make it feel like you're sharing something you learned, not something you're lecturing about
- Use short paragraphs (2–3 lines max) and line breaks for readability

Insight/Framework (Value section):

- Extract the universal principle or tactical takeaway from your story
- If relevant, present it as a simple framework (3 steps, 2 types of X, before/after comparison)
- This is where expertise shines — give away something genuinely useful

Close (Final 2–3 lines):

- Land the plane with a memorable closing thought or question to your audience
- Invitation to engage: "What's your experience with this?" or "Where do you see this playing out?"
- NO asks for likes, shares, or follows — let the content earn it

Tone requirements:

- Write like you're explaining this to a peer over coffee, not presenting to a board
- Confidence without arrogance — "here's what I've learned" not "here's what you should do"
- First-person storytelling, but the insight should apply to your audience
- Smart but accessible — avoid unnecessary jargon

Context about my background: **[your role, industry, what makes you credible on this topic]**

The specific insight or story I want to share: **[give the raw idea/experience]**

Who I want to reach: **[target audience — hiring managers, founders, your industry peers, etc.]**

WHEN TO USE

When you have a real insight worth sharing but need help structuring it so it resonates with your professional network and builds your authority.

PRO TIP

Post on Tuesday–Thursday between 8–10 AM in your timezone for maximum visibility, and engage with comments in the first 2 hours to boost algorithmic reach.

Engagement Hook Library

You are a social media copywriter who specializes in scroll-stopping opening lines. I need 50 high-performing hooks for posts about **[your niche/content theme]**.

Hook categories to include (provide 10 of each):

1. ****Pattern Interrupt Hooks**** — statements that break expectations or challenge assumptions

Example format: "Everyone tells you to **[common advice]**. Here's why that's backwards:"

2. ****Curiosity Gap Hooks**** — create information gaps that demand to be closed

Example format: "I just discovered why **[surprising outcome]**. The reason is not what you think:"

3. ****Personal Story Hooks**** — vulnerable or relatable moment that draws people in

Example format: "Three months ago I **[situation]**. Today **[transformation]**. Here's what changed:"

4. ****Data-Driven Hooks**** — surprising statistics or numbers that demand explanation

Example format: "I analyzed **[number]** of **[thing]** and found something shocking:"

5. ****Listicle/Framework Hooks**** — promise of organized, actionable information

Example format: "The **[number]** **[things]** that separate **[unsuccessful]** from **[successful]**:"

Requirements for each hook:

- Must be 1-2 sentences maximum
- Should work across multiple platforms (Twitter, LinkedIn, Instagram caption, etc.)
- Avoid overused phrases: "let's talk about", "here's the thing", "unpopular opinion", "hot take"
- Must create genuine curiosity, not clickbait disappointment
- Hooks should feel natural to my voice, not like a growth hacker wrote them

Context for customization:

- My niche/industry: **[specific area]**
- My audience's biggest pain points: **[list 3-5 specific problems]**
- My unique perspective or credentials: **[what makes your take different]**
- Content topics I frequently cover: **[list 5-7 themes]**

For each hook, include a **[Topic suggestion]** tag so I know what type of content would follow that hook.

WHEN TO USE

When you're batch-creating content and need proven opening lines that actually stop the scroll instead of blending into the feed.

PRO TIP

Save these hooks in a swipe file and A/B test them — track which hook styles get the most engagement for YOUR audience, then double down on those patterns.

Content Calendar System

You are a content strategist who builds sustainable posting systems for **[your platform — e.g., LinkedIn, Instagram, Twitter/X]**. Create a 30-day content calendar for my business/brand focused on **[your niche/offer]**.

Content pillars to balance (assign percentages based on my goals):

- Educational/Value content: **[X%]** — teach something specific
- Personal/Behind-the-scenes: **[X%]** — build connection and relatability
- Engagement/Conversation: **[X%]** — ask questions, start discussions
- Promotional/Offer: **[X%]** — showcase product, service, or results

For each day, provide:

1. ****Content Type:**** **[thread, carousel, video script, single post, story series, etc.]**
2. ****Topic/Angle:**** One sentence describing what the post is about
3. ****Hook/Opening Line:**** The first sentence or headline
4. ****Core Message:**** 2-3 bullet points outlining what to cover
5. ****CTA:**** What action you want the audience to take
6. ****Content Pillar:**** Tag which pillar this post serves

Calendar structure preferences:

- Posting frequency: **[X posts per day/week]**
- Best performing post types for my audience: **[based on past data or best guess]**
- Seasonal/timely hooks to include: **[any launches, events, or trends to leverage]**
- Topics I want to establish authority in: **[list 3-5 specific themes]**

Context about my business:

- What I sell/offer: **[product, service, or expertise]**
- Target audience: **[who they are and what they need]**
- Current audience size: **[small/growing/established]**
- Main business goal for content: **[awareness/authority/leads/sales]**

Additional requirements:

- Include 2-3 "viral attempt" posts designed for maximum reach
- Balance quick wins (easy to create) with pillar content (high effort, high value)
- Suggest 1 repurposing opportunity per week where one piece of content becomes 3+ posts
- Leave 2 "flex days" for timely reactions or trending topics

WHEN TO USE

When you need a complete content strategy that balances value, promotion, and engagement instead of posting random thoughts whenever you remember to.

PRO TIP

Batch-create all content in 2-hour blocks at the start of each week using this calendar as your guide — you'll never stare at a blank screen again.

Audience Deep Analysis

You are an audience research strategist who uncovers the real motivations, language patterns, and pain points of target audiences. Help me deeply understand **[my target audience]** so I can create content that resonates at a visceral level.

Conduct a comprehensive audience analysis covering:

1. Demographic & Psychographic Profile:

- Age range, career stage, income level, location
- Values, fears, aspirations beyond surface level
- Where they are vs. where they want to be

2. Language & Communication Patterns:

- What specific words and phrases do they use to describe their problems?
- What metaphors or comparisons resonate with them?
- What jargon do they use vs. avoid?
- How do they describe success in their own words?

3. Pain Point Hierarchy (ranked by intensity):

- Surface-level pain (what they say the problem is)
- Actual pain (what the problem really is)
- Emotional pain (how it makes them feel)
- For each pain point, describe: the trigger, the consequence, and what they've tried that didn't work

4. Content Consumption Behavior:

- What platforms do they use and why?
- What time of day are they most active and receptive?
- What content formats do they prefer (long-form, quick tips, stories, data)?
- What creators/brands do they already follow in my space?
- What makes them save/share/comment on content?

5. Decision-Making Process:

- What objections prevent them from taking action?
- What proof do they need to believe a claim?
- Who influences their decisions (peers, experts, data)?
- What's the gap between "I should do this" and actually doing it?

6. Content Opportunity Map:

Based on this analysis, identify:

- 5 underserved topics my competitors aren't covering well
- 3 emotional angles I should lean into
- 5 specific content ideas that would make this audience think "this was made for me"

Information to analyze from:

[Provide any of the following: customer reviews, survey responses, comment sections from competitor posts, Reddit threads, interview transcripts, your own customer conversations, or describe your target audience in detail]

My business/offer: [what you're selling or promoting]

Current hypothesis about my audience: [what you think you know about them]

WHEN TO USE

Before launching a new content strategy or when your current content isn't landing — this helps you understand your audience at a depth that makes your content feel personalized.

PRO TIP

Use this analysis to create an "audience avatar document" you reference before writing any piece of content — it eliminates guesswork and generic messaging.

Viral Content Deconstructor

You are a viral content analyst who reverse-engineers high-performing posts to extract replicable patterns. I'm going to share a piece of viral content from [platform], and I want you to break down exactly why it worked and how I can apply those principles.

The viral content:

[Paste the full post, thread, caption, or video script here]

Provide a detailed analysis covering:

1. Hook Analysis:

- What specific technique did the hook use? (pattern interrupt, curiosity gap, bold claim, relatability, controversy, etc.)
- Why did it work for this audience at this moment?
- What emotion did it trigger in the first 3 seconds/first line?

2. Structure Breakdown:

- Map out the exact structure (e.g., Hook → Story → Insight → CTA)
- Identify pacing: where did it speed up, slow down, or create pauses?
- Note any formatting choices that enhanced readability (line breaks, emojis, lists, etc.)

3. Psychological Triggers:

- What cognitive biases did this leverage? (social proof, scarcity, authority, reciprocity, curiosity, identity, etc.)
- What pain point or desire did it tap into?
- Did it create an "enemy" or "us vs. them" dynamic?

4. Engagement Mechanics:

- What specifically made people want to comment, share, or save?
- Was there a built-in conversation starter or debate point?
- Did it create a status signal (sharing this makes me look smart/in-the-know)?

5. Why This Worked Now:

- Was there a cultural moment, trend, or timing element?
- What made this feel fresh vs. overdone?

6. Replication Framework:

Create a fill-in-the-blank template I can use to apply this same structure to MY content:

- "Start with [type of hook] about [angle]"
- "Then [structure element] to [psychological effect]"
- "Close with [CTA type] that makes them [desired action]"

7. Adaptation for My Brand:

- Which elements can I directly copy without looking derivative?
- What needs to be modified to fit my voice and audience?
- Give me 3 specific content ideas for MY niche using this viral structure

My context:

- My niche/industry: **[your area]**
- My target audience: **[who you serve]**
- My current content challenge: **[what's not working for you now]**

WHEN TO USE

When you see a post that crushes and want to understand the mechanics behind it so you can apply the same principles without copying it directly.

PRO TIP

Build a "viral structure swipe file" where you save these analyses — over time you'll spot patterns across successful content and develop an instinct for what works.

Comment & DM Response Templates

You are a community engagement specialist who helps creators respond to their audience in a way that builds relationships, not just checks boxes. Create a response template library for my [platform] covering common scenarios.

For each scenario below, write 3 response variations (casual, professional, and playful tone):

Positive Engagement Responses:

1. Genuine compliment on my content ("This was so helpful!")
2. Someone sharing their own related story or experience
3. Request to collaborate or be on a podcast
4. Someone tagging a friend in the comments
5. Question asking for more detail on something I posted

Negative/Critical Engagement Responses:

6. Polite disagreement or counterpoint to my take
7. Aggressive criticism or personal attack
8. "This is obvious/I already knew this" dismissiveness
9. Questioning my credibility or credentials
10. Misunderstanding what I said (arguing against a strawman)

Sales/Pitch Responses:

11. Someone asking "How can I work with you?"
12. "Can I pick your brain?" or free consulting requests
13. Pitch/spam in my comments or DMs
14. Request for free advice that should be paid

Engagement-Building Responses:

15. Someone asking a question I've answered before
16. Open-ended "What do you think about [topic]?" question
17. Request for recommendations (tools, resources, etc.)
18. "Where do I start?" from a complete beginner

Each response template should:

- Feel human and conversational, not copy-paste robotic
- Include [personalization slots] where I customize with their name or specific detail
- When appropriate, include a soft CTA (check out this post, DM me, try this)
- De-escalate tension for negative scenarios without being defensive
- Build relationship capital, not just close the conversation

My brand voice guidelines:

- Tone: [friendly/authoritative/witty/warm/direct]

- Things I never say: [list any phrases or attitudes to avoid]

- How I want people to feel after interacting with me: [valued/inspired/informed/entertained]

Context:

- My niche: [what you post about]

- My offer (if any): [what you sell, so responses can strategically mention it]

- My engagement goal: [build community/drive sales/establish authority/all of the above]

WHEN TO USE

When you want to engage authentically with your audience at scale without spending 2 hours a day writing custom responses or sounding like a bot.

PRO TIP

Keep these templates in a note on your phone — when you're responding to comments in dead time (waiting in line, between meetings), you'll have thoughtful replies ready instead of just dropping emojis.

Brand Voice Blueprint

You are a brand voice strategist who helps creators and businesses develop a distinctive, recognizable communication style. Help me define and document my brand voice so all my content sounds cohesively like "me" (or my brand).

First, analyze my existing voice by reviewing:

[Paste 5–10 examples of your best-performing or most authentic content — posts, captions, emails, video scripts, whatever represents how you naturally communicate]

Then create my Brand Voice Blueprint covering:

1. Voice Personality Profile:

Define my voice using 4–5 specific attributes (NOT generic words like "authentic" or "professional"):

- For each attribute, provide: a one-sentence definition, what it sounds like in practice, and what it does NOT sound like
- Example: "Playfully contrarian — I challenge assumptions with wit, not aggression. Sounds like: 'Everyone says X, but here's why Y is actually better.' Does NOT sound like: Cynical, dismissive, or mean-spirited takedowns."

2. Language Patterns:

- Sentence structure: **[short and punchy / varied / long and flowing]**
- Vocabulary level: **[accessible / technical / mix]**
- Unique phrases or verbal tics I use often: **[list them]**
- Words/phrases I avoid: **[things that don't fit my brand]**
- How I use humor: **[sarcasm / self-deprecation / wordplay / observational / don't use humor]**
- Punctuation style: **[em-dashes, semicolons, ellipses, or keep it simple]**

3. Perspective & Values:

- What I believe that shapes my communication: **[3–5 core beliefs]**
- What I'm FOR: **[the causes, approaches, or ideas I champion]**
- What I'm AGAINST: **[the things I push back on or call out]**
- How I handle disagreement: **[direct debate / find common ground / ignore and focus on my lane]**

4. Emotional Range:

- Primary emotion I evoke: **[inspiration / urgency / calm confidence / excitement / rebellion]**
- How I balance vulnerability vs. authority: **[describe the mix]**
- When I use ALL CAPS, *emphasis*, or **bold**: **[for what effect]**

5. Platform Adaptations:

How does my voice shift across platforms while staying recognizably "me"?

- **[Platform 1]: [adjustments to tone, length, formality]**
- **[Platform 2]: [adjustments to tone, length, formality]**
- **[Platform 3]: [adjustments to tone, length, formality]**

6. Voice Comparison Matrix:

Compare my voice to 3 well-known creators/brands:

- "I sound like **[Creator A]** in terms of **[specific quality]**, but different because **[specific difference]**"
- "I sound like **[Creator B]** in terms of **[specific quality]**, but different because **[specific difference]**"
- "I sound like **[Creator C]** in terms of **[specific quality]**, but different because **[specific difference]**"

7. Before/After Examples:

Take 3 pieces of generic content and rewrite them in MY voice:

- Generic: "Here are 5 tips for productivity"
- My Voice: **[your rewrite]**

My context:

- Industry/niche: **[your space]**
- Target audience: **[who I talk to]**
- How I want to be perceived: **[the reputation I'm building]**
- Creators whose voice I admire (not copy): **[list 2-3 for reference]**

WHEN TO USE

When your content feels inconsistent, you're hiring writers/assistants who need to sound like you, or you're building a brand that needs a recognizable voice across all content.

PRO TIP

Share this blueprint with AI tools when generating content — the more specific your voice documentation, the less editing you'll need to do to make AI-written content sound like you.

Platform Growth Playbook

You are a social media growth strategist with expertise in **[specific platform — Instagram, LinkedIn, Twitter/X, TikTok, YouTube, etc.]**. Create a comprehensive 90-day growth plan to take me from **[current follower count]** to **[target follower count]** with an engaged, high-quality audience.

My context:

- Platform: **[which one]**
- Current followers: **[number]**
- Target followers: **[goal number]**
- Niche/industry: **[your area]**
- What I sell/offer (if monetizing): **[product, service, or building authority for job opportunities]**
- Current posting frequency: **[how often you post now]**
- Time I can commit daily: **[realistic hours per day]**
- Past content that performed well: **[describe or paste links]**
- Past content that flopped: **[describe what didn't work]**

Build me a 90-day playbook covering:

Phase 1: Foundation (Days 1–30) — Optimize & Test

- Profile optimization checklist: **[what to update in bio, profile pic, featured content, etc.]**
- Content testing framework: **[what formats, topics, and styles to test to find what resonates]**
- Posting frequency and timing: **[specific schedule based on my availability]**
- Engagement strategy: **[how much time on commenting, DMing, building relationships]**
- Key metrics to track: **[which numbers actually matter vs. vanity metrics]**
- Week-by-week focus areas and milestones

Phase 2: Momentum (Days 31–60) — Double Down & Collaborate

- Content focus: **[based on Phase 1 testing, what to create more of]**
- Collaboration strategy: **[how to leverage others' audiences — guest posts, shoutouts, etc.]**
- Algorithm hacks specific to this platform: **[what behaviors the algorithm rewards right now]**
- Engagement amplification: **[tactics to boost reach of top-performing content]**
- Community building: **[how to convert followers into engaged community members]**
- Week-by-week focus areas and milestones

Phase 3: Scale (Days 61–90) — Systematize & Accelerate

- Content batching system: **[how to produce high-volume content efficiently]**
- Repurposing workflow: **[turn one piece into 5+ assets]**
- Lead magnet or hook offer: **[if monetizing, what to offer to convert followers to email/customers]**
- Paid amplification strategy: **[if/when to use ads or boosted content]**
- Sustainability plan: **[how to maintain growth without burning out]**
- Week-by-week focus areas and milestones

Supporting Framework:

- ****Daily Non-Negotiables:**** The 3–5 tasks I MUST do every single day for growth

- **Weekly Review Questions:** What to assess each week to stay on track
- **Red Flags:** Signs that I'm growing followers but not building a real audience
- **Pivot Triggers:** Metrics that indicate I need to change strategy

Deliverables:

- A week-by-week action plan with specific tasks
- Content pillar breakdown (what % of content should be educational, personal, promotional, etc.)
- Engagement strategy (how many comments/DMs per day, where to engage)
- Growth accelerators specific to this platform
- Tools/resources I'll need

Tailor this plan to be realistic for someone with **[my time commitment]** and prioritize strategies that build an engaged audience, not just vanity follower counts.

WHEN TO USE

When you're serious about growing on a platform and need a structured, step-by-step plan instead of randomly posting and hoping for the best.

PRO TIP

Set a calendar reminder every Sunday to review your progress against this playbook — growth comes from consistent execution, not perfect content.

Content Repurposing Multiplier

You are a content repurposing strategist who helps creators extract maximum value from every piece of content. I just created **[describe the original content piece — long-form video, podcast episode, blog post, LinkedIn article, Twitter thread, etc.]** and I want to turn it into 10+ pieces of content across multiple platforms.

Original Content Details:

- Format: **[video/audio/written]**
- Topic: **[what it's about]**
- Key points covered: **[list the main takeaways, stories, or insights]**
- Length: **[duration or word count]**
- Best moments: **[timestamps, quotes, or sections that stood out]**
- Target audience: **[who this was created for]**

Create a comprehensive repurposing plan:

Tier 1: Direct Excerpts (minimal editing required)

1. Pull quotes → Turn into quote graphics for Instagram/LinkedIn
- Provide 5 specific quotes with design suggestions
2. Key insights → Twitter/X thread (break down the main points)
- Provide the thread structure (hook + 5-7 value tweets + CTA)
3. Highlight clips → TikTok/Reels/Shorts (identify the viral-worthy moments)
- Provide 3 specific clip suggestions with timestamps and hook scripts
4. Listicle → LinkedIn carousel or Instagram carousel
- Provide slide-by-slide breakdown

Tier 2: Remixed & Reformatted (moderate editing)

5. FAQ post → Take questions answered in the content and create a Q&A post
- Provide the top 5 questions and concise answers
6. Email newsletter → Expand on one key point with a story/example
- Provide subject line, opening hook, and outline
7. Contrarian take → Find a counterintuitive point and make it a standalone hot take post
- Provide the angle and hook
8. Before/after → If applicable, show the transformation or comparison from the content
- Provide the framing

Tier 3: New Angles (requires fresh creation but uses same research)

9. Beginner version → Simplify the core concept for someone brand new to the topic
- Provide hook and structure
10. Advanced deep-dive → Take one subtopic and go 3 levels deeper

- Provide hook and structure

11. Case study → Turn data/examples from the content into a mini case study

- Provide structure and key data points

12. Myth-busting → Address misconceptions related to the topic

- Provide 3 myths to bust based on the content

Repurposing Strategy:

- **Sequencing:** What order should I release these pieces for maximum impact?
- **Platform matching:** Which repurposed formats work best on which platforms?
- **Linking strategy:** How do I use these pieces to drive traffic back to the original long-form content?
- **Freshness span:** How long can I keep repurposing this before it feels stale?

Bonus:

- Suggest 2-3 "part 2" or follow-up content ideas inspired by audience questions or gaps in the original content

Provide specific, copy-paste ready content for each repurposed piece, not just ideas.

WHEN TO USE

After creating any substantial piece of content — this ensures you get 10x the mileage out of the effort you already put in instead of letting great content die after one post.

PRO TIP

Batch your repurposing — dedicate 2 hours right after creating the original content to knock out all repurposed versions while it's fresh in your mind. Your content calendar will thank you.
